Global Market Highlights

Trump said the US does not need a deal with Iran and told JD Vance to focus on domestic issues instead of negotiations with Tehran. The remarks weakened prospects for ongoing indirect diplomatic contacts to produce a deal that could end the war. Brent crude rose after the statement, while Trump warned that hostilities could resume. Without a new agreement, it remains unclear how restrictions on Iran's nuclear activities would be enforced.

US core CPI rose 0.3% month over month in October, while headline CPI increased 0.4%, underscoring persistent price pressures. Annual inflation figures were not released because of the government shutdown. Higher costs for food, electricity, housing and insurance stood out, while prices also rose noticeably for some tariff-affected goods. The stronger inflation report supported expectations of a Fed rate hike in December and raised the possibility of a larger increase.

Fed officials are divided over the pace of rate hikes. Christopher Waller said a 50-basis-point increase in December could be warranted if core CPI comes in at 0.3% or higher. Lorie Logan backed at least two 25-basis-point hikes, potentially at a faster pace if needed. Austan Goolsbee described the inflation data as "concerning," while Jeff Schmid argued that the current policy rate is not restrictive. Anna Paulson said wage pressures remain limited and inflation expectations are consistent with the 2% target, supporting a gradual pace of rate increases.

Early assessments suggest that Jensen Huang's departure as Nvidia's CEO could affect the company's progress in AI and the US hardware advantage over time, although Nvidia's existing capabilities are expected to limit the near-term impact. With Huang's influence as an advocate for chip sales to China diminished, the US may find it easier to tighten export and remote-access restrictions, limiting China's access to advanced AI processors. This could also complicate the expected Trump-Xi talks and the extension of the US-China trade truce, which expires in January.

Technology products stood out in China's foreign trade in October: exports grew 35.2% year over year and imports rose 41.6%, while high-tech exports increased 66.6%. The recovery's limited support from domestic demand means that any weakening in external demand—particularly if data center investment slows in the US—could become a significant growth vulnerability.

China's PPI rose 5.7% year over year in October, exceeding market expectations, while CPI inflation fell to 0.7%. Higher energy and AI hardware costs contributed to the rise in producer prices, while falling food prices and weak domestic demand point to continued deflationary pressures in the economy.

The APEC Summit in China and a possible meeting between the US, Chinese and Russian leaders are in focus during the week of November 14–20. Markets will also watch Nvidia's earnings, Anthropic's IPO and the minutes of the Fed's October meeting. US retail sales and industrial production data are due, along with inflation figures from the UK, the euro area and Japan. The COP31 Climate Conference in Antalya will continue through November 20.

Trade Uncertainty → Geopolitical and Energy Security Shock

2025
TRADE UNCERTAINTIES DOMINATED THE AGENDA

TARIFF WARS
Tariffs and protectionist policies constrained global trade.

PRESSURE ON THE DOLLAR
The Trump administration's aggressive tariff rhetoric put pressure on the dollar.

DEBATE OVER FED INDEPENDENCE
Debate over the Fed's independence reduced monetary policy predictability.

RUSSIA–UKRAINE WAR
Continued to put pressure on energy and commodity prices.

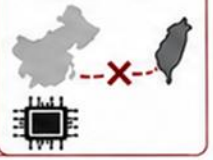

MEASURES TO CURB OIL PRICES
Trump's measures to restrain oil prices were closely watched.

MIDDLE EAST RISK PREMIUM REMAINED HIGH
The Israel–Palestine conflict and regional tensions kept the Middle East risk premium elevated.

CHINA–TAIWAN TENSIONS
Risks to global technology and semiconductor supply chains increased.

SUPPLY CHAINS
Uncertainty and protectionist trends in global trade weakened supply chains.

FROM TRADE UNCERTAINTY TO A GEOPOLITICAL AND ENERGY SUPPLY SHOCK

2026
GEOPOLITICAL CONFLICTS INTENSIFIED ENERGY AND INFLATION RISKS

TWO CHOKEPOINT RISKS TO ENERGY SUPPLY
Disruptions to shipments through Hormuz, compounded by attacks in the Red Sea, put global energy trade under pressure along two critical maritime routes.

HORMUZ
Gulf oil and LNG exports

BAB EL-MANDEB
Red Sea–Suez route

DUAL DISRUPTION: FREIGHT • INSURANCE • DELIVERY TIMES ↑

NEW ENERGY PRICE SHOCK
Supply disruptions and risks along critical routes pushed energy and transport costs higher.

GROWTH DIVERGENCE ACROSS THE GLOBAL ECONOMY
Energy-importing economies came under pressure, while technology investment supported some economies.

ENERGY IMPORTERS: PRESSURE

TECHNOLOGY ECONOMIES: SUPPORT

GLOBAL GROWTH: 3%

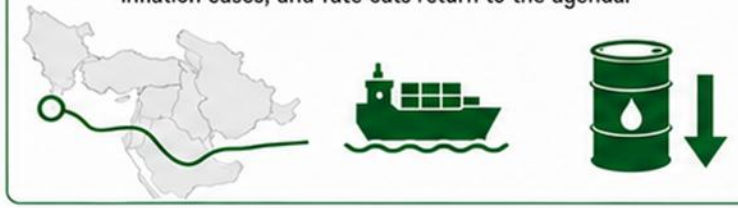

RATE CUTS DELAYED, RISK OF HIKES RETURNED
Energy-driven inflation weakened easing expectations, bringing fresh rate hikes in some economies back onto the agenda.

RISK OF RATE HIKES

2026 SECOND-HALF SCENARIOS

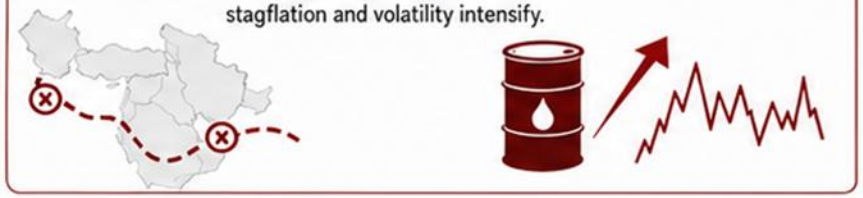

EASING TENSIONS
Maritime traffic normalizes; pressure on oil and inflation eases, and rate cuts return to the agenda.

PROLONGED CONFLICT
Disruptions continue intermittently; oil remains elevated, growth weakens, and central banks wait.

DOUBLE-CHOKEPOINT SHOCK
RISK SCENARIO — NOT A REALIZED PRICE
If both Hormuz and Bab el-Mandeb close, oil rises above $120; stagflation and volatility intensify.

IMF World Economic Outlook, July 2026

IMF's 2026 and 2027 Growth Projections (October 2026, % Change)					
IMF	Forecasts	Projections		Difference Compared to July 2026 Projections

Source: IMF, World Economic Outlook Report, October 2026.

According to the IMF, the global economic growth forecast for 2026 has been slightly revised upward from 3% to 3.1%, while the projection for 2027 remains unchanged at 3.4%.

- The IMF noted that the global economy has demonstrated resilience; however, it highlighted that this resilience is unevenly distributed across countries and that the scope for economic adjustment is rapidly narrowing in the short term.

- It was noted that economic activity in the first half of 2026 performed better than expected, despite persistent pressures stemming from the protracted war in the Middle East and trade tensions; meanwhile, emphasis was placed on the momentum generated by the technology cycle—driven by robust investments in artificial intelligence—which is bolstering demand.

- While global imbalances are expected to decline only moderately in the medium term, the medium-term growth outlook remains weak relative to historical averages and continues to diverge across countries.

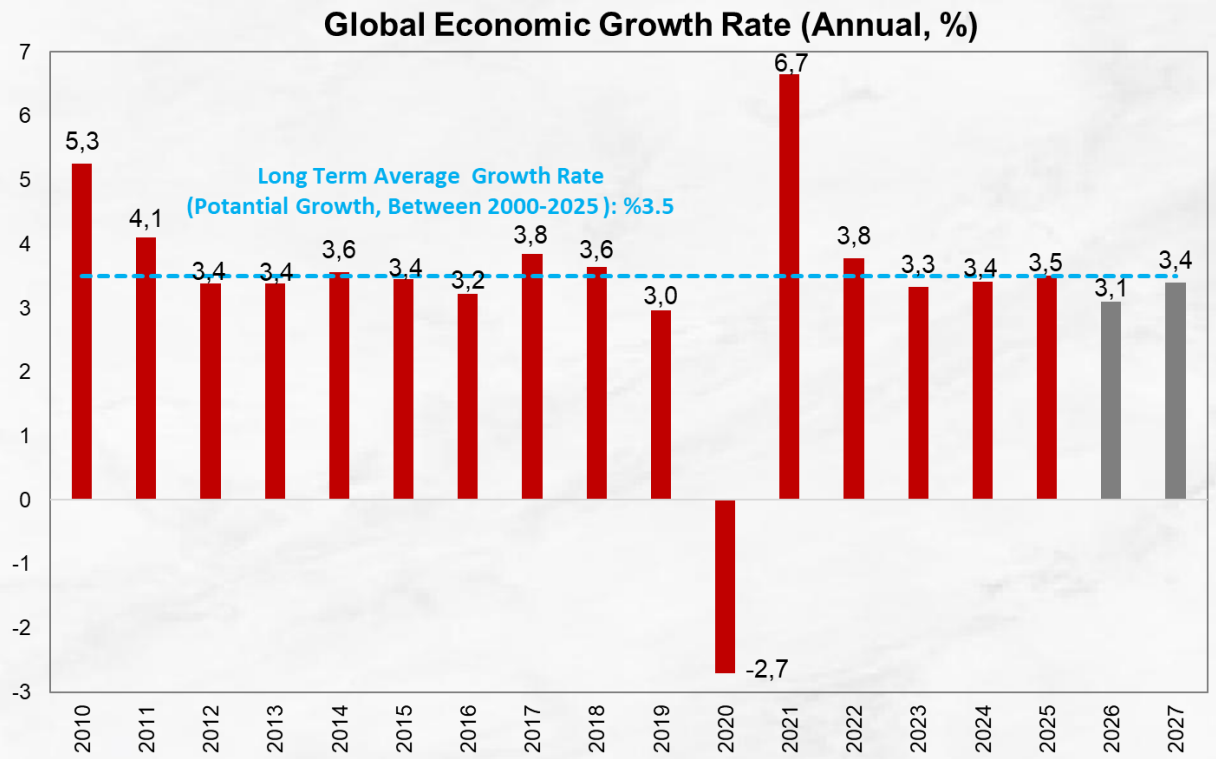

- Global trade volume growth is projected to slow in 2026 before stabilizing in 2027; factors influencing this trend include the adverse impact of tariffs, the adjustment process within production chains, and the continued strong performance of technology-related trade.

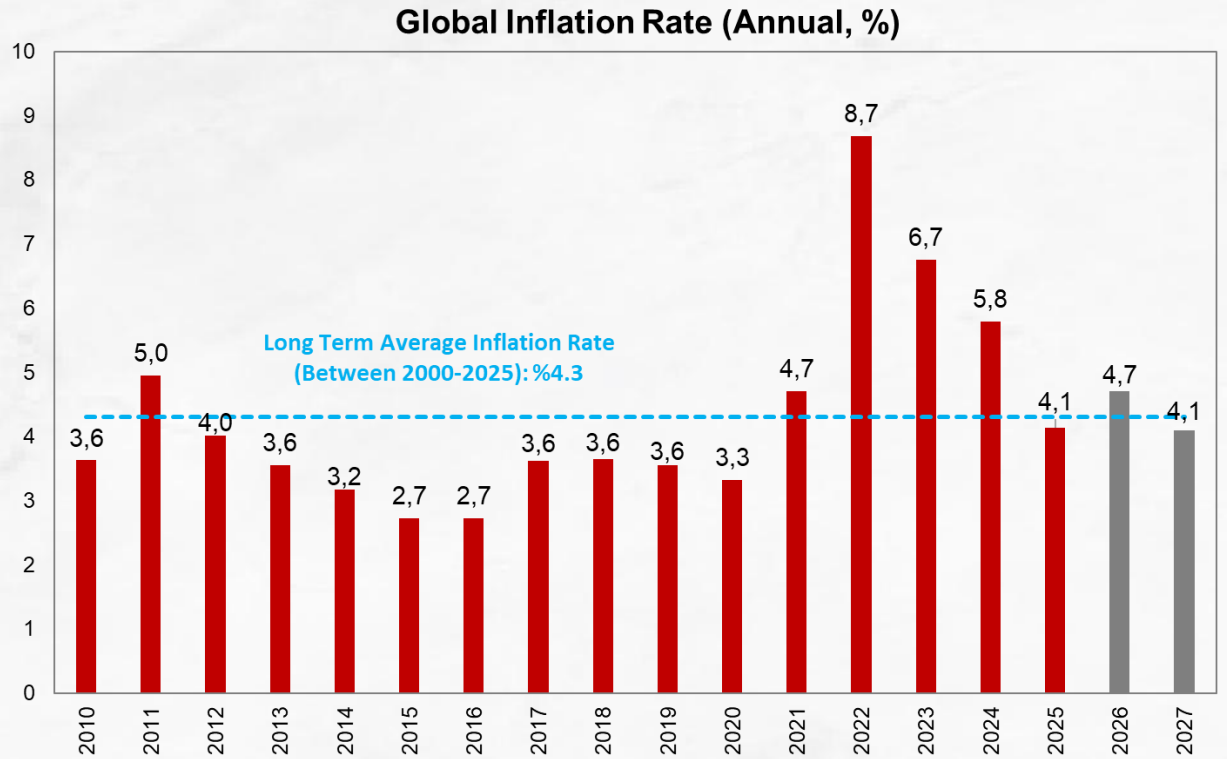

- Pointing to a downside bias in risks, the IMF warned that prolonged uncertainty or a further escalation of tensions in the Middle East could cause energy and food prices to remain high and volatile, reignite inflationary pressures, destabilize fiscal and external balances, and dampen growth. On the other hand, it was noted that accelerating momentum in artificial intelligence investments—alongside productivity gains derived from AI or a lasting easing of geopolitical and trade tensions—could bolster growth.

- It was stated that **global headline inflation** is projected to rise from 4.1% in 2025 to 4.7% (previously: 4.7%) in 2026—driven largely by a temporary surge in energy and food prices—before declining to 4.1% (previously: 3.9%) in 2027.

Global Growth and Inflation

Global growth in 2026 is expected to remain below average, while inflation is projected to stay slightly above average.

Source: IMF expectations reflect the October projections.

Global shocks on the agenda.

The new conflict in the Middle East poses a significant risk to the global economy. Approximately 20% of global oil supply and LNG trade passes through the Strait of Hormuz.

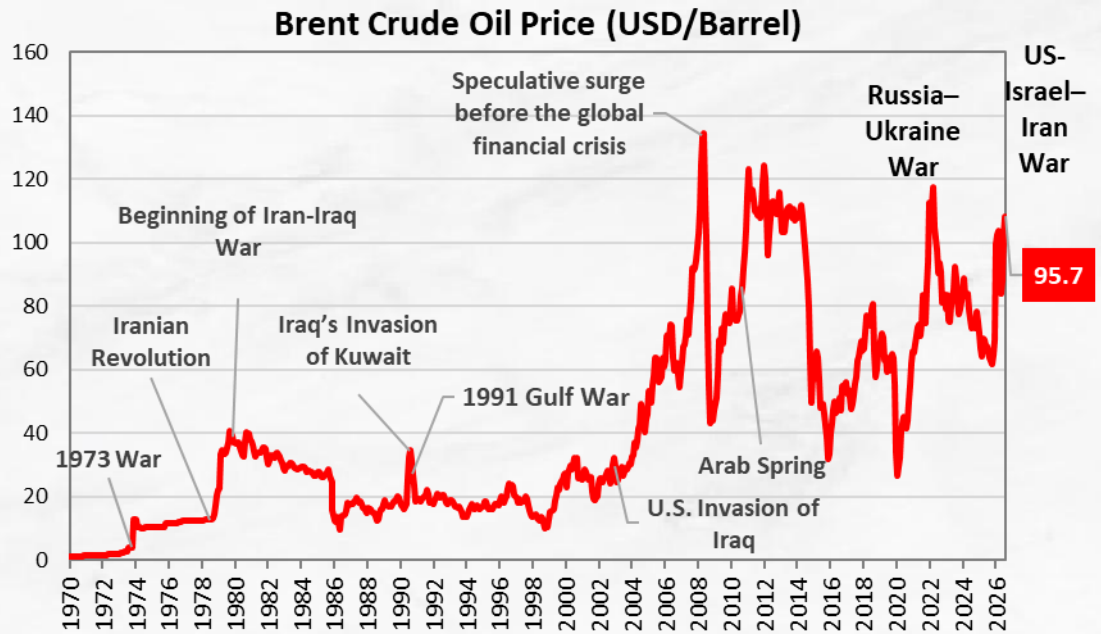

According to IMF calculations, **a sustained 10% increase in oil prices could raise global inflation by approximately 40 basis points while reducing global production by 0.1–0.2%.**

Oil Prices

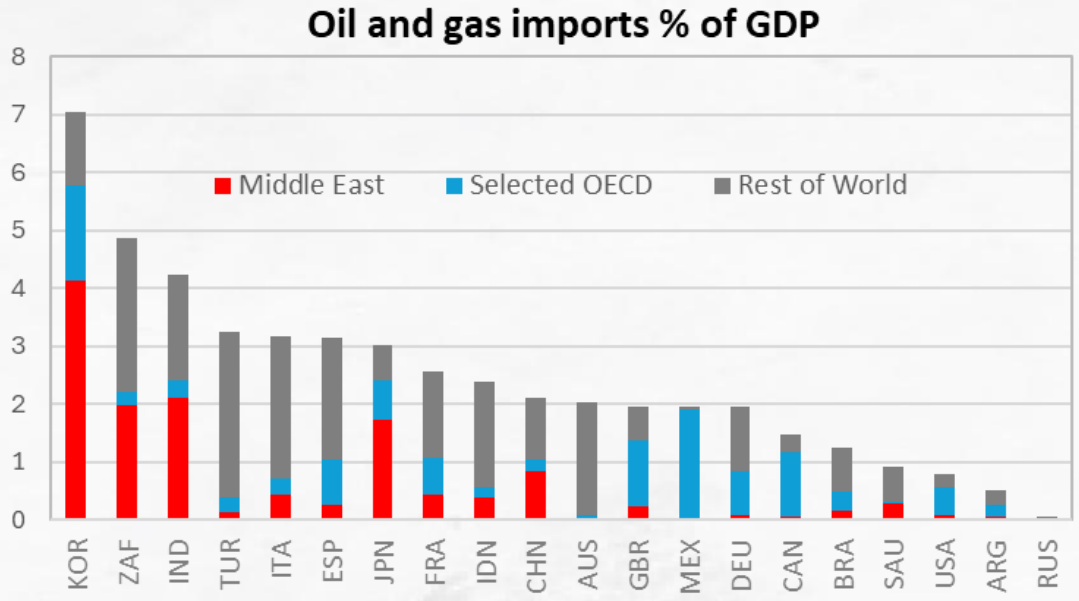

News of the attacks in the Strait of Hormuz supported oil prices, while expectations of a 2027 supply surplus and the search for alternative sources of supply capped the gains.

Brent crude oil prices reached their highest levels since 2022 at the end of April, hitting $126 per barrel.

A large share of LNG exports (93% for Qatar and 96% for the UAE) depends on the Strait of Hormuz, with no alternative routes available; therefore, any disruption would quickly affect energy-import-dependent countries in Asia.

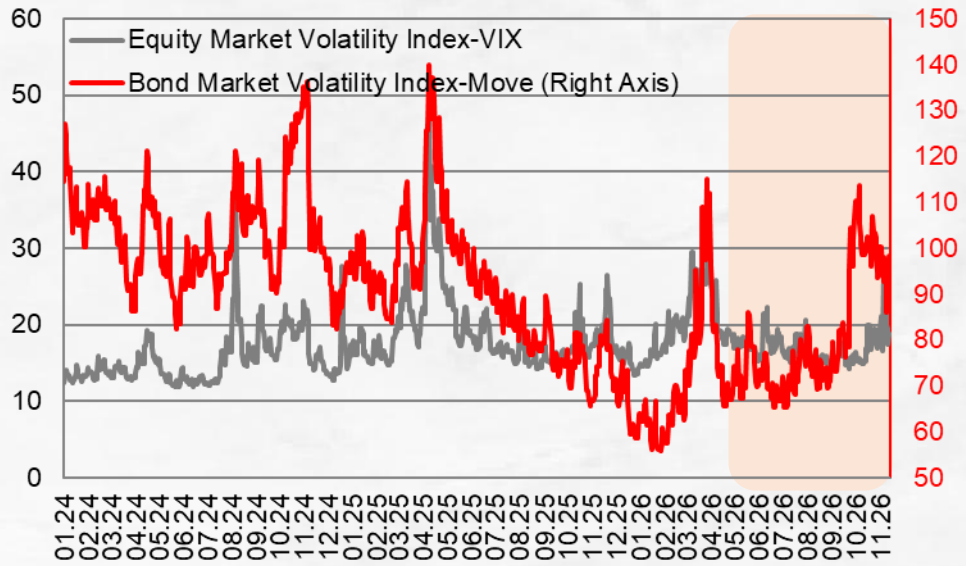

Source: Bloomberg.

Source: OECD*

*Note: Based on nominal import values. This indicator represents oil and gas imports as a share of a country's GDP. The Middle East includes Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, Oman, and the United Arab Emirates. Selected OECD countries include Australia, Canada, Colombia, Mexico, Norway, and the United States. The rest of the world refers to all other countries.

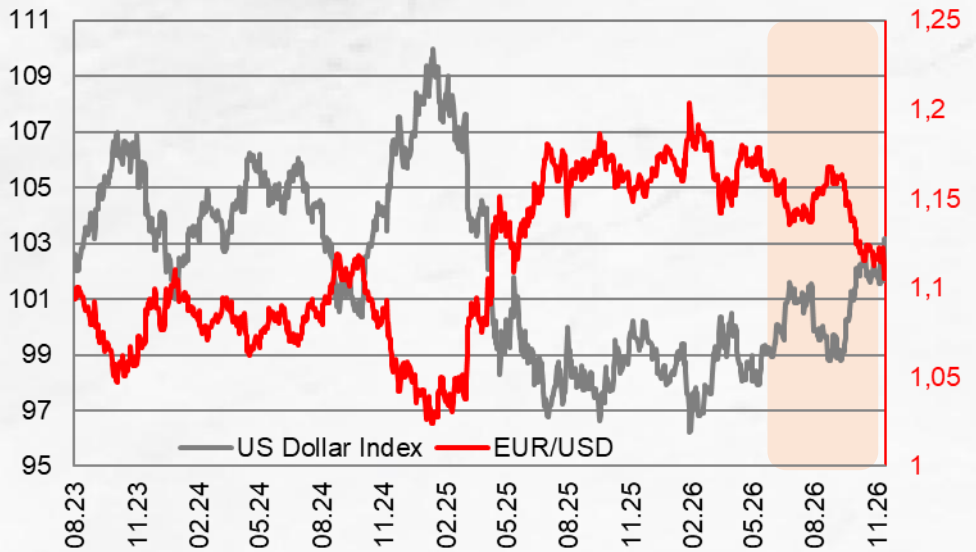

Global Risk Sentiment and Dollar

Sticky US inflation and the Fed's renewed hawkish stance triggered a repricing across global interest rates. The sharp selloff in bond markets, alongside more limited volatility pricing by equity investors, highlighted a divergence between the two markets.

***VIX (Volatility Index)** – Often called the *"fear gauge"*, the VIX measures the **expected volatility of the S&P 500 index** based on option prices. It reflects **market sentiment and investor uncertainty**; a higher VIX indicates greater expected market volatility.

****MOVE (Merrill Lynch Option Volatility Estimate) Index** – The MOVE Index tracks **implied volatility in U.S. Treasury markets**, derived from options on Treasury bonds of different maturities. It serves as a **"bond market volatility" gauge**, similar to how the VIX reflects volatility in equities.

The upward repricing of Fed rate expectations following the US inflation data supported the dollar.

2025 stood out as a year in which the dollar's long-standing **safe-haven narrative came under clear scrutiny.** The trade shock triggered by tariffs announced by President Trump in April, together with growing uncertainty over the **institutional independence of the Federal Reserve**, pushed the dollar index toward **its weakest annual performance since 2017.**

Global Bond Yields

Persistent inflation, hawkish Fed signals and rising debt supply intensified selling pressure on US Treasuries. The rise in bond yields spread to global markets, particularly Japan, Australia and France.

Key Drivers of Rising Global Bond Yields

GROWTH, INFLATION AND SUPPLY

01 Strong growth

Supports inflation and rate hike expectations.

02 Energy and food prices

Cost pressures complicate disinflation.

03 Higher-for-longer rates

Expectations of persistently high rates lift bond yields.

04 AI investment

Tech bond issuance increases competition for investor capital.

05 Fiscal deficits and public debt

Bond supply and fiscal risks are rising.

FUNDING AND MARKET RISKS

06 Defense spending

Raises governments' borrowing needs.

07 Japan-related bond sales

Position unwinds add to selling pressure.

08 Trade tensions

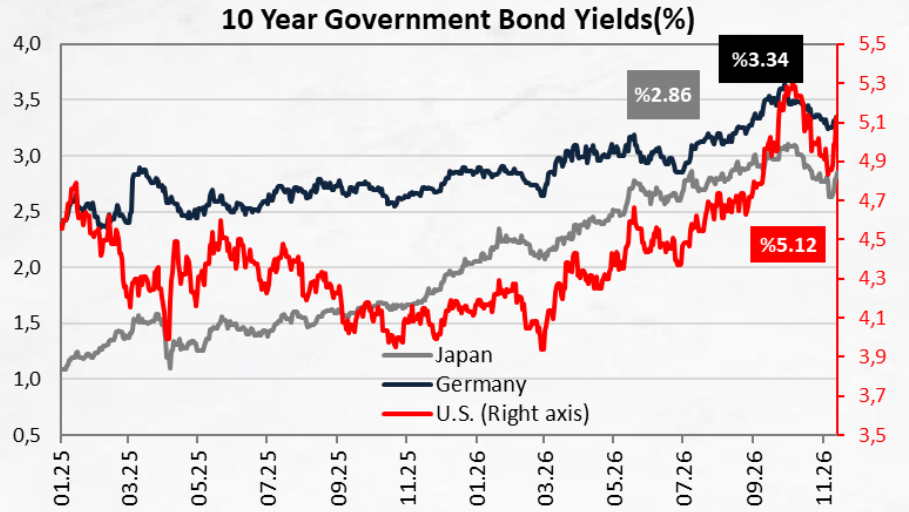

Tariffs fuel inflation; uncertainty raises risk premia.

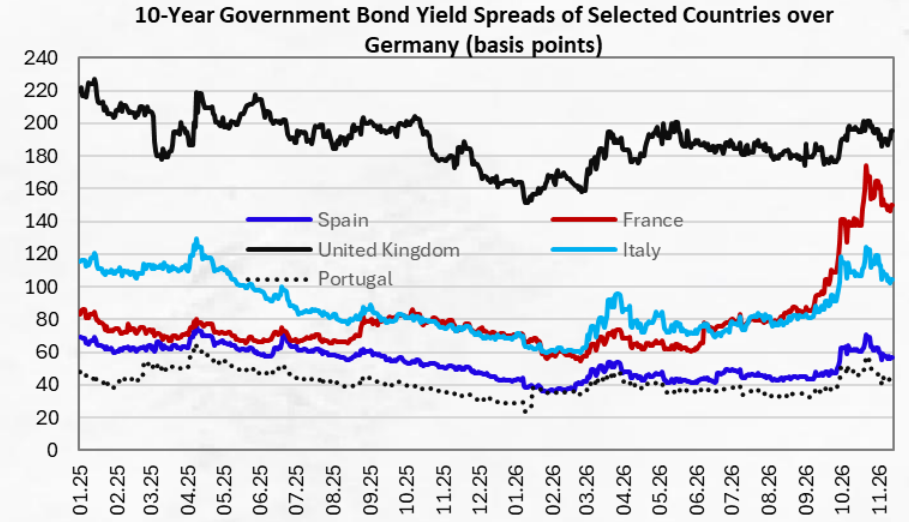

09 Yield-sensitive investors

Demand for higher yields is strengthening.

10 A shrinking savings surplus

Available funds are tightening as financing needs rise.

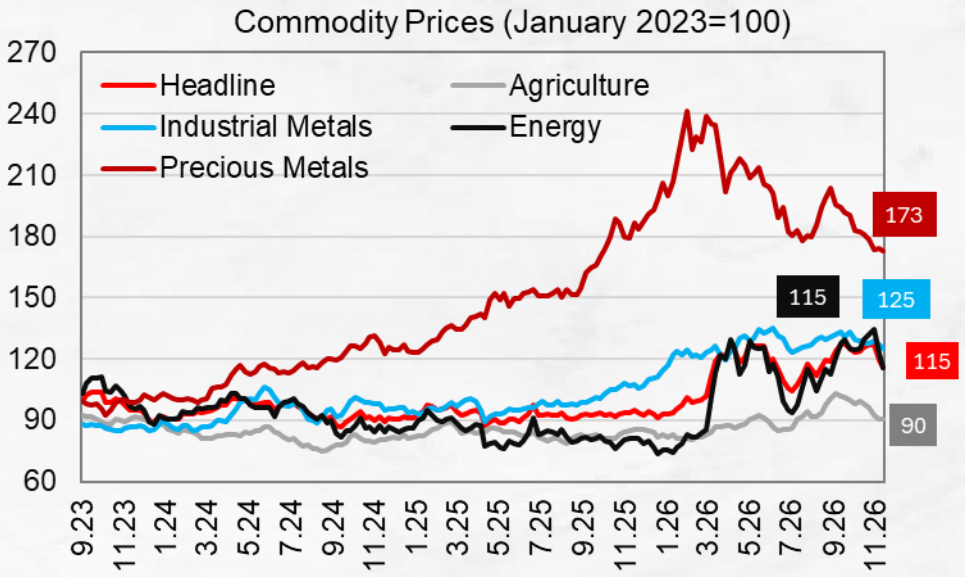

GDP and Per Capita Income by Country, 2020 - 2025

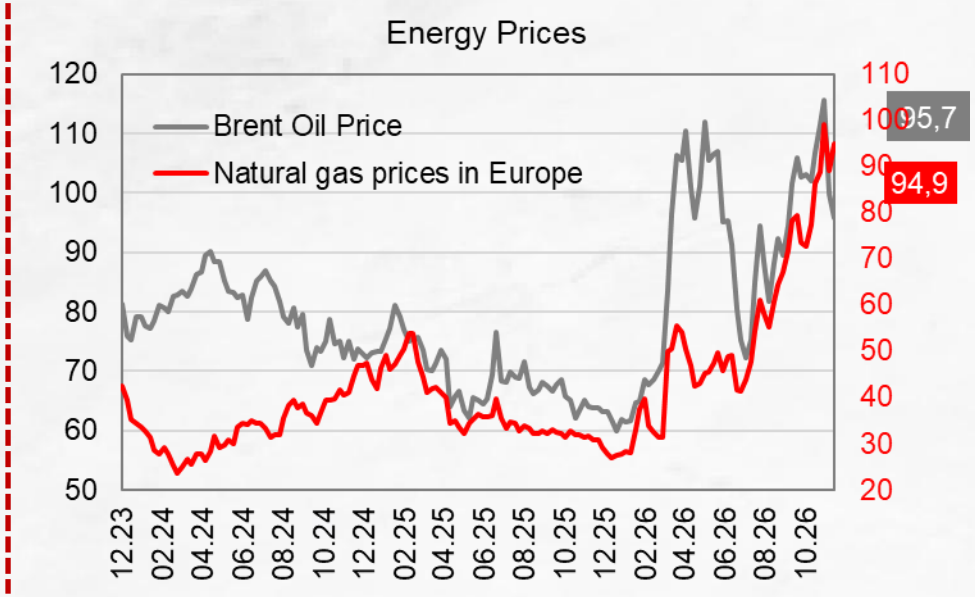

Türkiye rose one spot in GDP rankings in 2025 to become the 16th largest economy, and climbed two spots in per capita income rankings to 65th place.

	GDP Sizes by Country, Top 25 Countries (Billion USD)

Summary of Developments in 2025

Türkiye's Economic Growth Rates

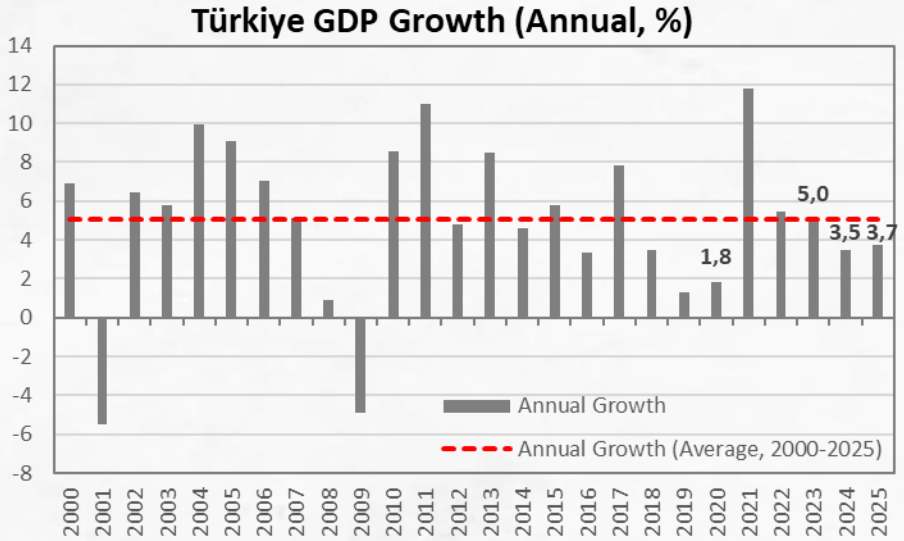

The Turkish economy expanded by **2.3% year-on-year in the second quarter**, below both the **Bloomberg consensus forecast of 2.5%** and the first quarter's **upwardly revised growth rate of 2.6%** (from 2.5%). This marked the weakest annual growth since the second quarter of 2020, while growth in the first half of the year stood at **2.5%**. Despite the slowdown in annual economic activity, the economy recorded its **24th consecutive quarter of expansion** since the third quarter of 2020.

Seasonally and calendar-adjusted GDP increased by 1.1% quarter-on-quarter, the strongest pace since the second quarter of last year. Quarterly growth therefore accelerated markedly from the first quarter's modest **0.3%** increase and moved closer to its historical average of 1.2%.

On the expenditure side, **private consumption remained the main growth driver, contributing 2.3 percentage points**, while net exports added 0.6 points, providing positive support for the first time in six quarters. On the production side, agriculture and industry each contributed 0.5 points, while the contribution from services declined to 0.1 points and construction subtracted 0.1 points from growth.

Growth for 2025 was revised up to 3.7% from 3.6%, remaining above the 3.3% forecast in the Medium-Term Programme.

The Market Participants Survey puts the growth expectation for 2026 at 3.1%.

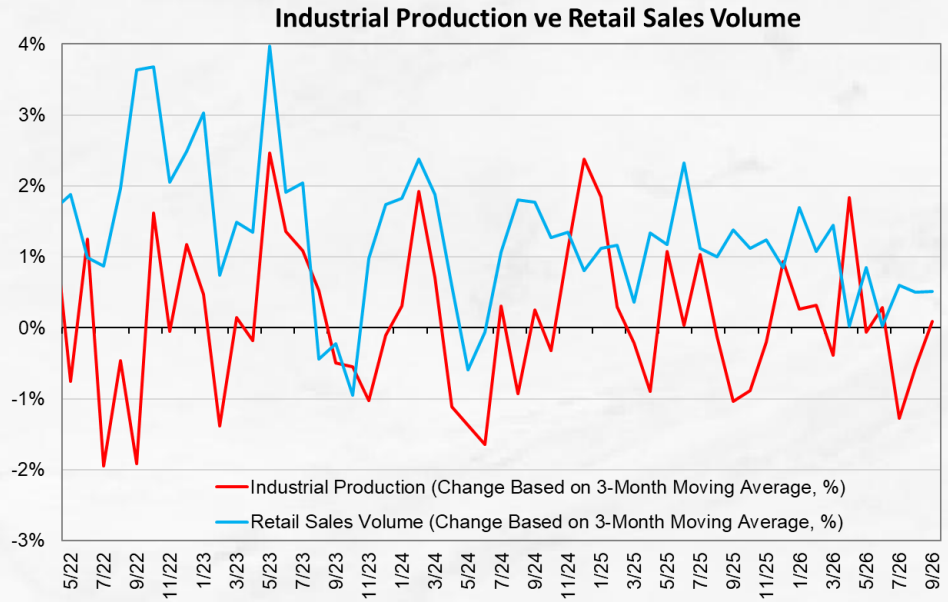

Contributions to Economic Growth

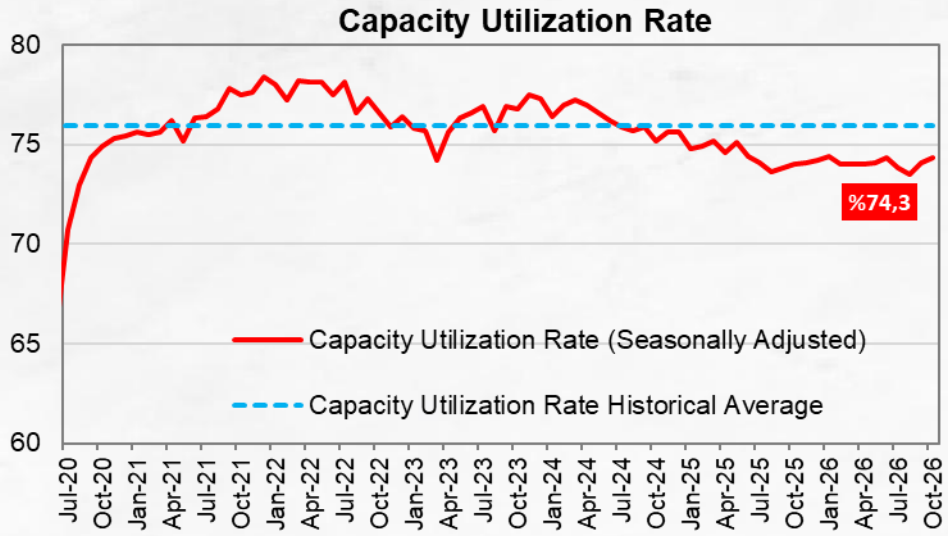

Private consumption remained the main driver of growth, contributing 2.3 percentage points; however, its contribution declined from 3.6 points in the first quarter, signalling a normalization in domestic demand. With public consumption subtracting 0.2 points, total consumption contributed 2.1 points to growth. Meanwhile, as imports contracted more sharply than exports, net exports made a positive contribution of 0.6 points to growth for the first time in six quarters.

Industrial Production, Retail Sales and Capacity Utilization Rate

Industrial production recorded a recovery in September.
Capacity utilization, a leading indicator, continued its upward trend in October.

Industrial production, based on data adjusted for seasonal and calendar effects, rose by 2.1% in September—following declines of 0.9% in both July and August—signaling a recovery after two consecutive months of contraction. On an annual basis, production increased by 2.6% in September, rebounding from a 1.7% decline in August; this marked the strongest recovery in five months and brought an end to a four-month streak of continuous decline.

- Furthermore, **the three-month moving average**—which reduces short-term volatility to provide a clearer view of the underlying trend—showed a modest 0.1% increase in September, following a 0.6% decline in August, pointing to a slight recovery.

The volume of retail sales, which grew by 1.6% month-on-month in August, saw its growth rate slow to 0.1% in September, indicating a notable deceleration in consumer spending.

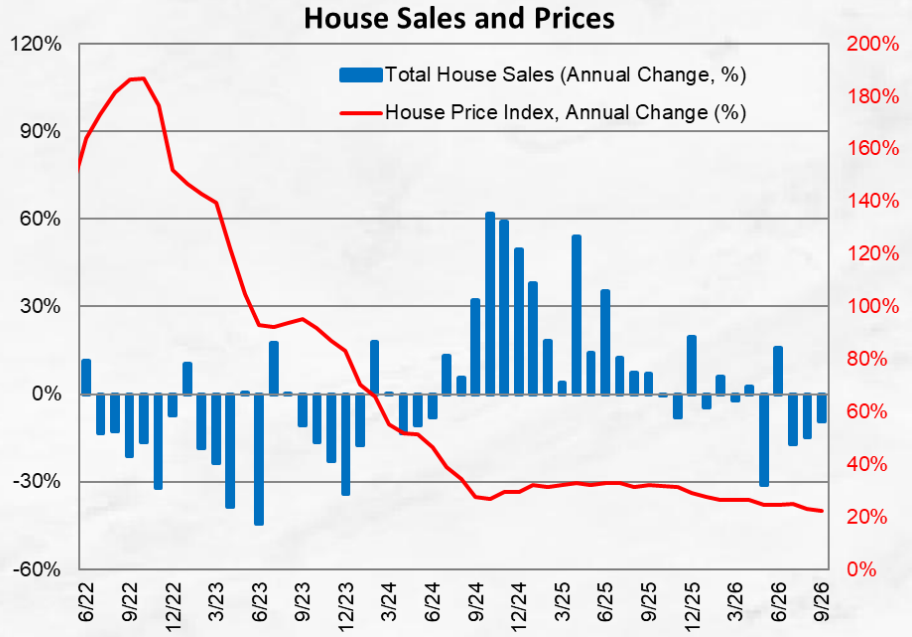

- When examining **the three-month moving average for retail sales volume**—a leading indicator for consumer spending trends—the growth rate in September was recorded at 0.5%, a figure similar to that observed in August.

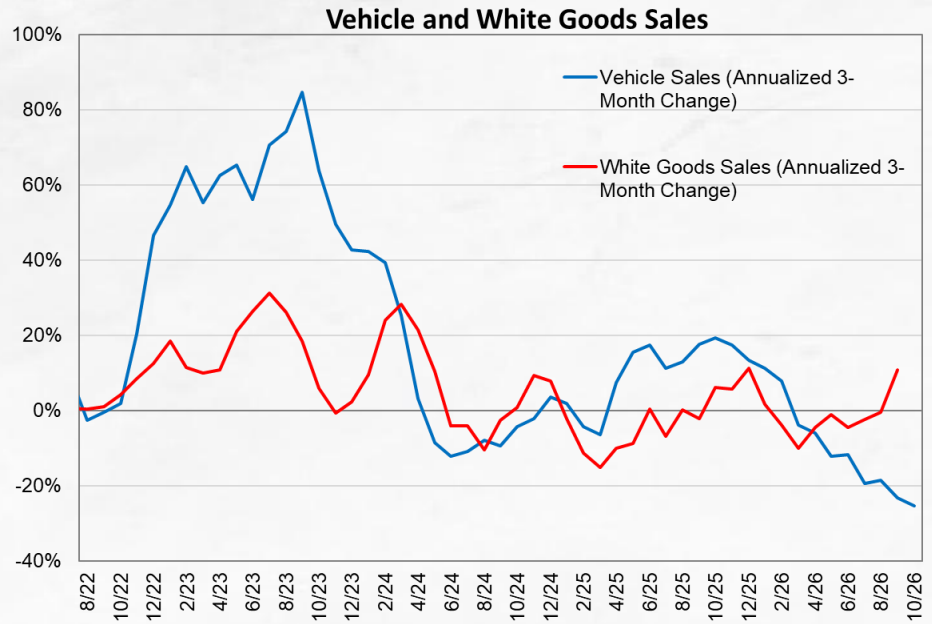

The seasonally adjusted capacity utilization rate rose by 0.2 percentage points in October, increasing from 74.1% to 74.3%—its highest level in the last four months.

Capacity utilization remains below its historical average of around 76%. The current outlook suggests that a strong and sustained recovery in investment appetite will take time.

House, Vehicle and White Goods Sales

While a recovery is being observed in residential property and home appliance sales, the trend for vehicle sales remains weak.

Total housing sales, increased by 11.8% in September—following a 3.1% rise in August—reaching 142,390 units, the highest level recorded in the last nine months. Furthermore, housing sales in September surpassed the historical average. For context, the monthly average for housing sales stood at approximately 147,000 units, while the historical average is 122,000 units.

The monthly growth rate of the housing price index accelerated from 0.83% in August to 1.22% in September, while the annual growth rate declined from 22.90% to 22.34%—the lowest level recorded since May 2020.

In real terms, housing prices fell by 5.7% year-on-year in September. Consequently, with the exception of November 2025, the nominal annual change in housing prices has remained below the annual inflation rate for the past 32 months.

Domestic vehicle sales, tracked using three-month moving averages to smooth out volatility, declined for the eighth consecutive month as of October, recording double-digit contractions in six of those months.

White goods sales, based on three-month moving averages, rose by 10.9% in September, ending a seven-month decline.

Medium Term Program (2027-2029)

	MTP				
Medium Term Program-Projections	**2025 (Realization)**	**2026**	**2027**	**2028**	**2029**

In the Medium Term Program (MTP, 2027 - 2029) published by the government in September, a downward revision was observed in growth expectations, while an upward revision was seen in inflation forecasts.

CBRT Inflation Report (2026-IV)

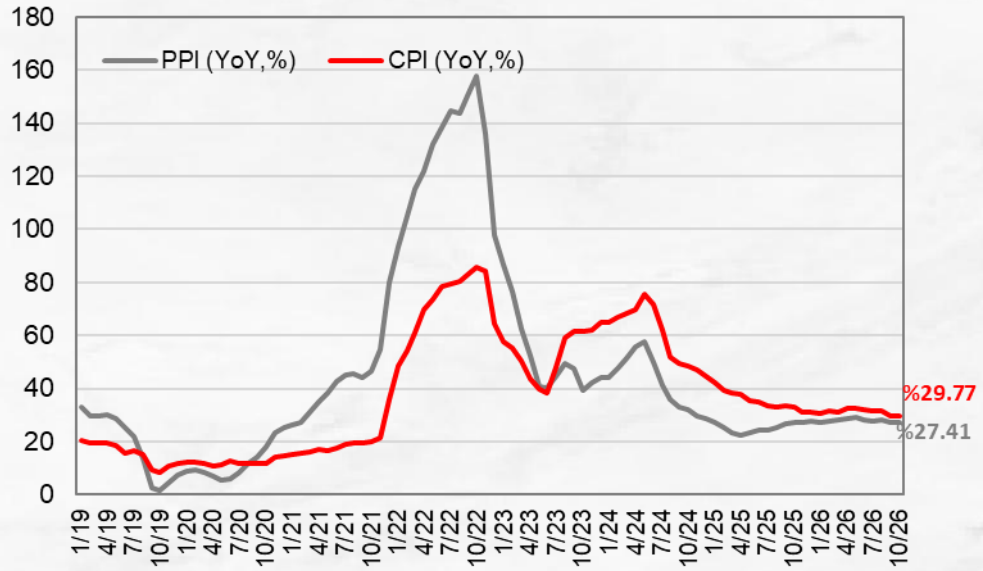

In its fourth Inflation Report of the year, the CBRT set interim inflation targets at 24% for year-end 2026 (unchanged from the previous target), 21% for year-end 2027 (previously 15%), and 13.5% for year-end 2028 (previously 9%).

The CBRT also revised its year-end inflation forecasts upward: to 29.5% from 28% for 2026, 21% from 15% for 2027, and 13.5% from 9% for 2028.

Inflation and Inflation Expectations

Annual inflation edged up slightly but remained below 30%.

*Inflation expectations are the **monthly estimates in the latest Market Participants Survey published by the CBRT,** as well as the annual estimates for the end of this year and next year, and for the next 12 and 24 months.

October CPI rose **2.58% month on month**, above the Bloomberg consensus estimate of 2.4%. Annual inflation edged up from 29.73% to **29.77%**, also exceeding the 29.5% forecast.

October PPI inflation slowed from 2.07% to **1.65% month on month**, below its historical averages: 2.12% in 2024, 2.06% in 2025 and 1.83% since the data series began in 2010. Annual PPI inflation edged up from 27.38% to **27.41%**, remaining above its 2025 average.

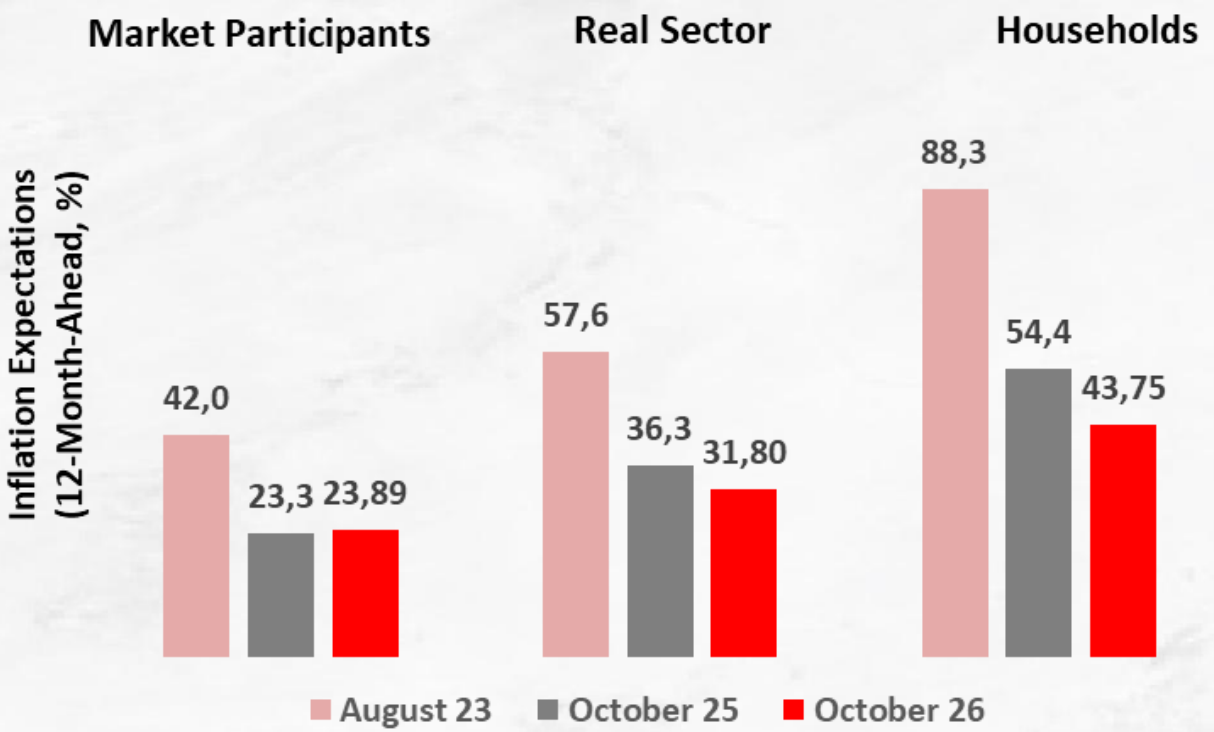

Inflation Expectations

In October, while a slight increase was observed in market participants' annual inflation expectations for the 12-month horizon, there was a partial improvement in the annual inflation expectations of households and the real sector for the same period.

Market participants' annual inflation expectation for the 12-month horizon rose slightly from 23.70% to 23.89% in October.

The real sector's inflation expectation for the 12-month horizon declined marginally from 32.50% to 31.80%.

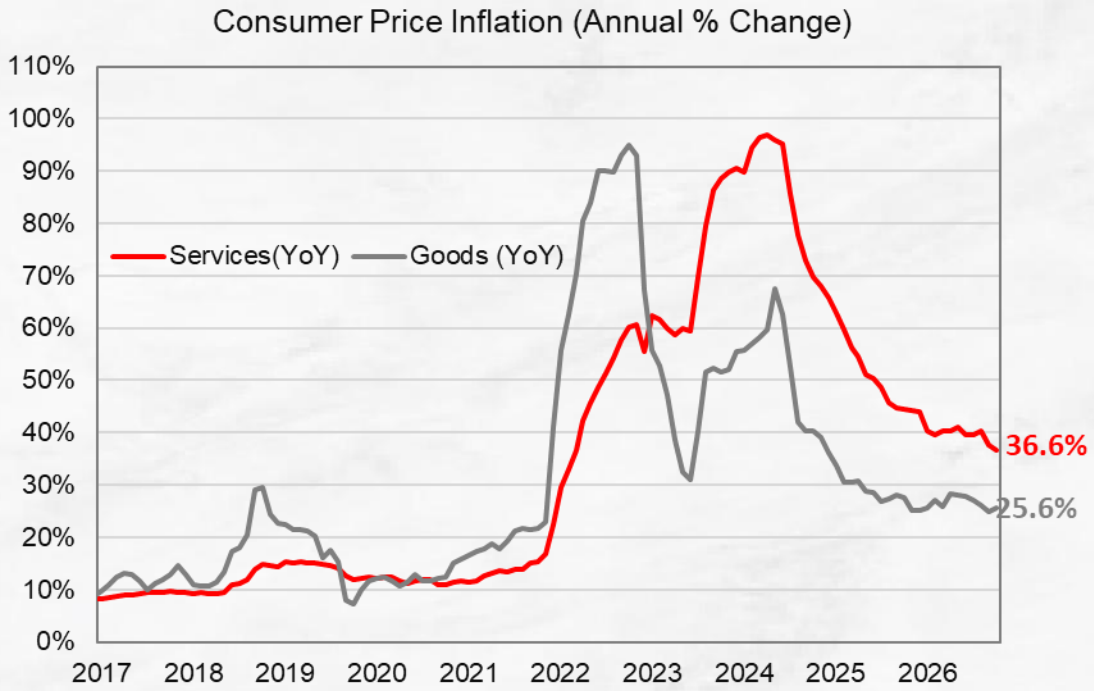

•Households—the segment representing the most persistent inflation expectations—also saw a partial decrease, with their expectations falling from 45.60% to 43.75%.

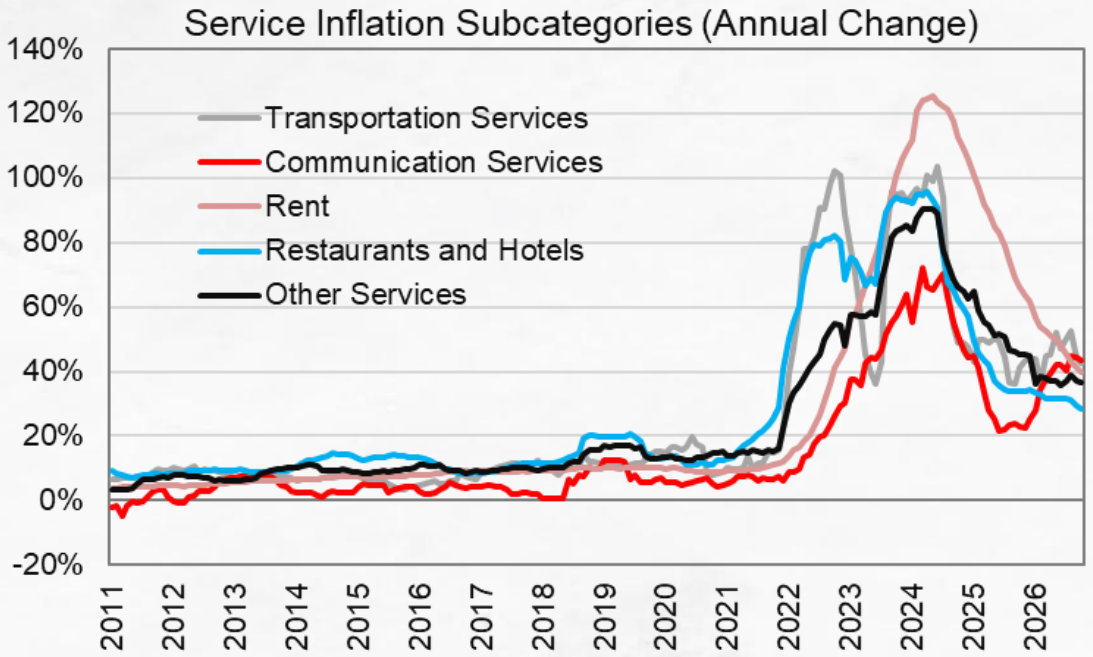

*Since June 2023, the policy rate has been raised from 8.50% to 15%, marking the beginning of a monetary tightening cycle.

Contributions of Main Groups to Inflation

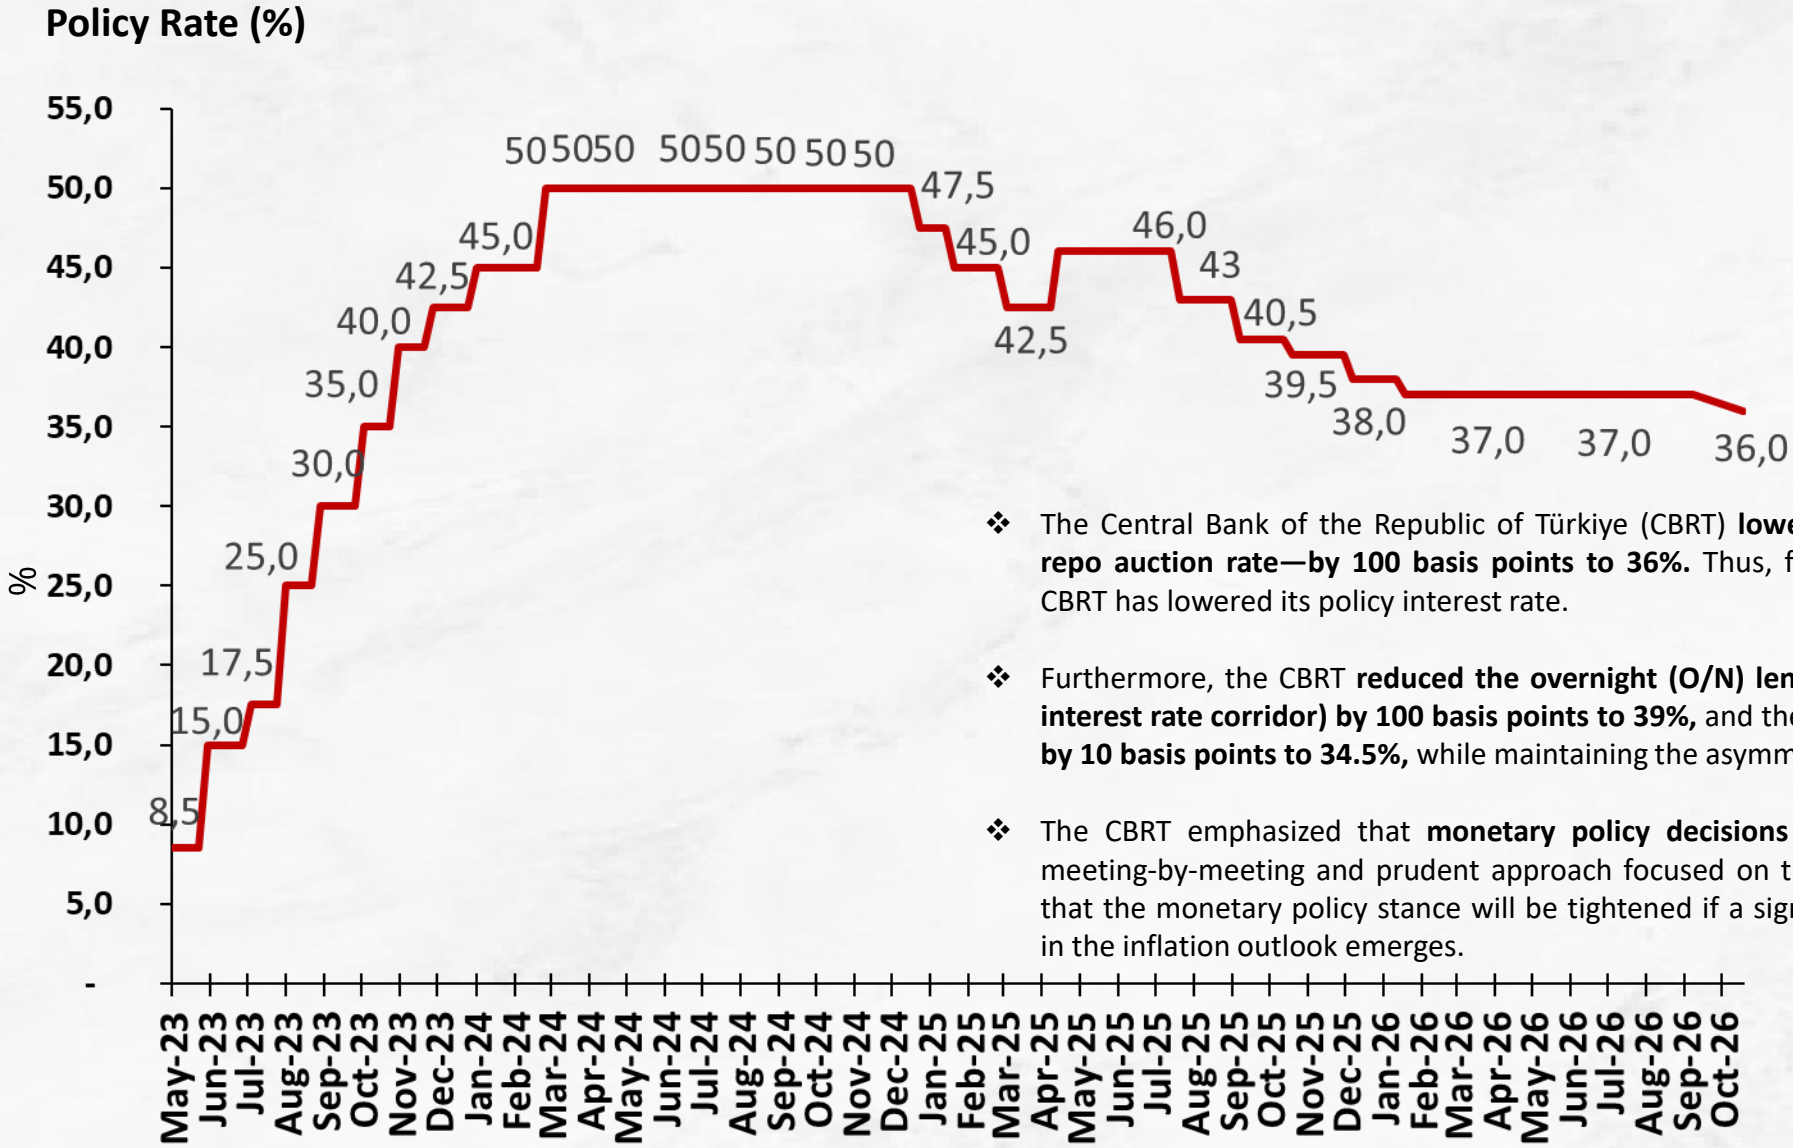

In October, CPI rose by 2.58% month on month, bringing annual inflation to 29.77%. After declining for the previous two months, food and non-alcoholic beverage prices increased by 3.50%, driven by a sharp rise in fresh fruit and vegetable prices. Energy prices rose by 4.92%, reflecting increases in fuel, LPG and bottled gas prices. Clothing prices picked up with the start of the new season, while monthly services inflation slowed to 0.99%. Prices of goods excluding energy and food rose by 3.45% month on month.

Policy Rate

CBRT Cut Interest Rates in October

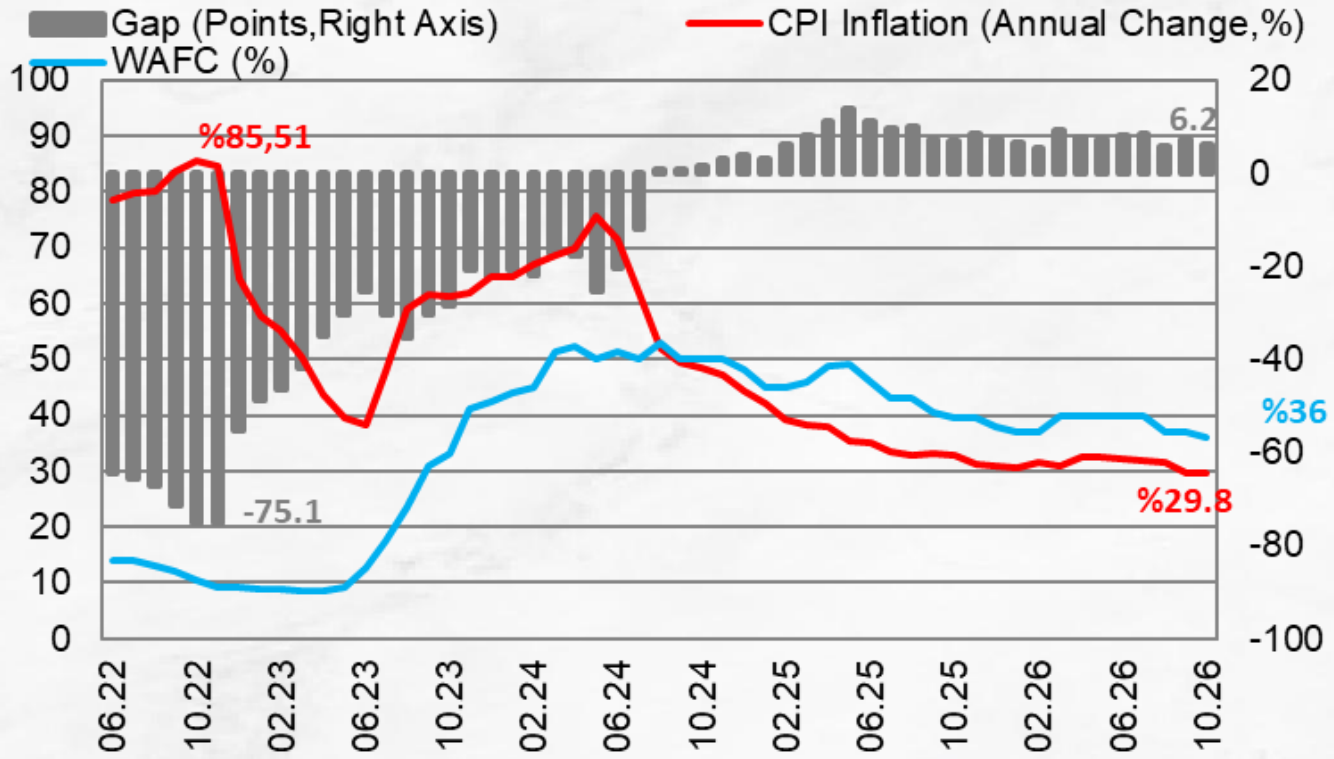

- The Central Bank of the Republic of Türkiye (CBRT) **lowered its policy rate—the one-week repo auction rate—by 100 basis points to 36%.** Thus, for the first time since January, the CBRT has lowered its policy interest rate.
- Furthermore, the CBRT **reduced the overnight (O/N) lending rate (the upper bound of the interest rate corridor) by 100 basis points to 39%,** and the **borrowing rate (the lower bound) by 10 basis points to 34.5%,** while maintaining the asymmetric structure of the corridor.
- The CBRT emphasized that **monetary policy decisions** will continue to be taken with a meeting-by-meeting and prudent approach focused on the inflation outlook, and reiterated that the monetary policy stance will be tightened if a significant and persistent deterioration in the inflation outlook emerges.

While quantitative tightening continues, the macroprudential framework remains intact.

Difference Between the CBRT Interest Rate and CPI Inflation Rate

Difference Between the Policy Rate and CPI Inflation

Tight monetary policy remains in place to ensure a lasting decline in inflation.

- **Since August**, **a positive real interest rate** has been maintained (the first time since post-2021).
- The positive real interest rate stood at 6.2 percentage points.

Macroprudential Measures

TRY Deposit Share Regulations

Calculation Period Extended to 8 Weeks
The calculation period for TRY deposit rules has been extended from 4 weeks to 8 weeks.

Growth Targets for Individual TRY Deposits Increased
For banks with a 60–65% share, the target was raised from 0.2 to 0.4 percentage points; for banks below 60%, it was raised from 0.4 to 0.8 percentage points.

Commission Rates Reduced
The commission rate applied according to the TRY share was reduced from 4% to 3%; for commercial loans, it was reduced from 2% to 1.5%.

Foreign Exchange Rate Calculation Method Updated
Calculations will use the average exchange rate over the last 24 weeks instead of the last 12 weeks.

Credit Growth Limits and SME Definition

Credit Growth Limits
Eight-week growth limits: personal loans 3.5%; vehicle loans 3.5%; SME TRY loans 5.5%; non-SME corporate TRY loans 2.5%.

Limits for Consumer and Other Loans
The growth limit was set at 3% for vehicle loans, personal loans, and overdraft loans with more than 3 installments; the limit for overdraft facilities was set at 1%.

Tightening of FX Loans
The foreign currency loan growth limit was reduced from 1.0% to 0.5%.

SME Revenue Threshold Raised to TRY 1 Billion
The sales/assets threshold for SME classification was raised from TRY 500 million to TRY 1 billion (approximately USD 25 million).

Capital Adequacy Ratio (CAR) and Risk Weights

Simplification of Calculations
Additional risk weights in CAR calculations have been removed; negative valuations in the HTCS portfolio have been excluded from the capital calculation.

Fixed Exchange Rate Application Removed (2026 Transition)
The fixed exchange rates used for credit risk (USD/TRY: 32.83; EUR/TRY: 35.13) and the calculation flexibility are being removed as of 2026.

Reserve Requirement (RR) Ratios

TRY Deposit Reserve Requirements
The RR ratio was set at 17% for demand, 1-month, and 3-month TRY deposits, and at 10% for maturities longer than 3 months.

Foreign Currency and Repo Regulations
RR ratios for foreign currency deposits and precious metals are in the 28–32% range; for offshore repos, 20% applies up to 1 month and 16% up to 3 months.

Indexed Deposits
The reserve requirement ratio for deposits indexed to CPI, PPI, and TLREF is 10%.

Credit Card and Fee Regulations

Tiered System for Maximum Credit Card Interest Rates
Below TRY 30,000: 3.25% | TRY 30,000–180,000: 3.75% | Above TRY 180,000 and cash advances: 4.25%.

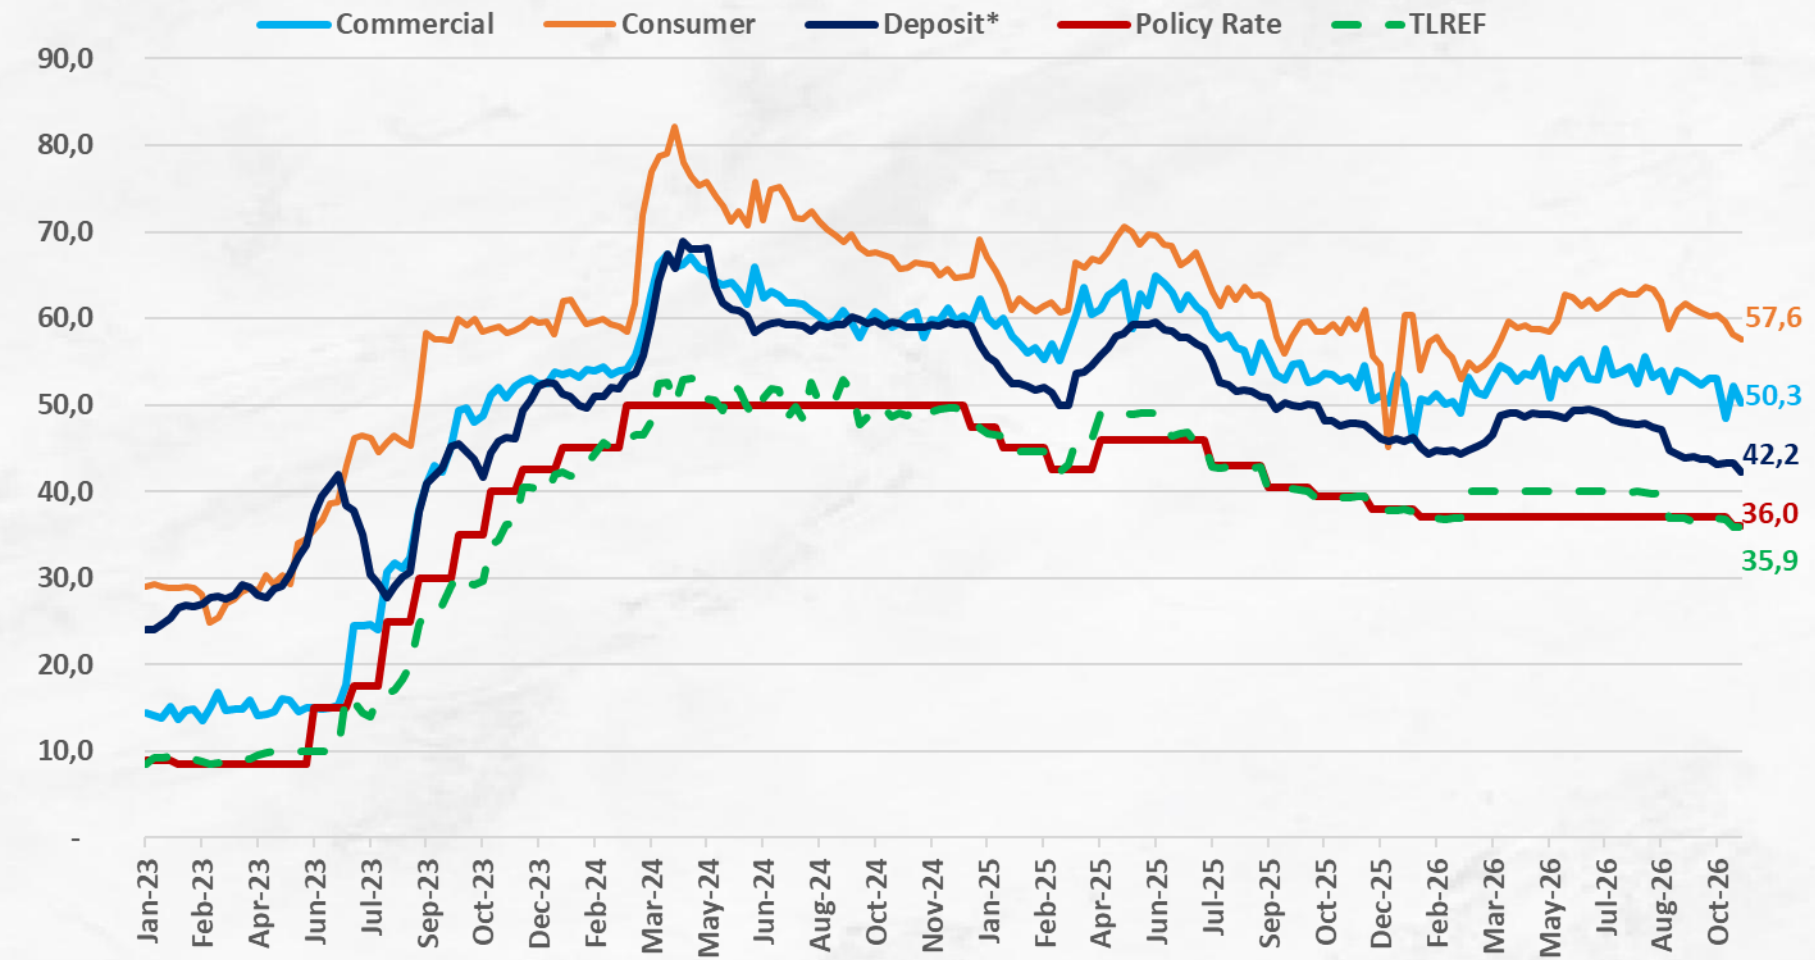

Limit Regulations and Restructuring
Overdraft limits are capped at twice monthly income; overdue debts may be restructured for up to 48 months upon request.

Commercial Loan Fees
The loan allocation fee was set at 0.20%; loan utilization and revolving credit fees were set at 1.10%.

The Trend of Interest Rates

The effects of the tight monetary stance are being seen in financial markets.

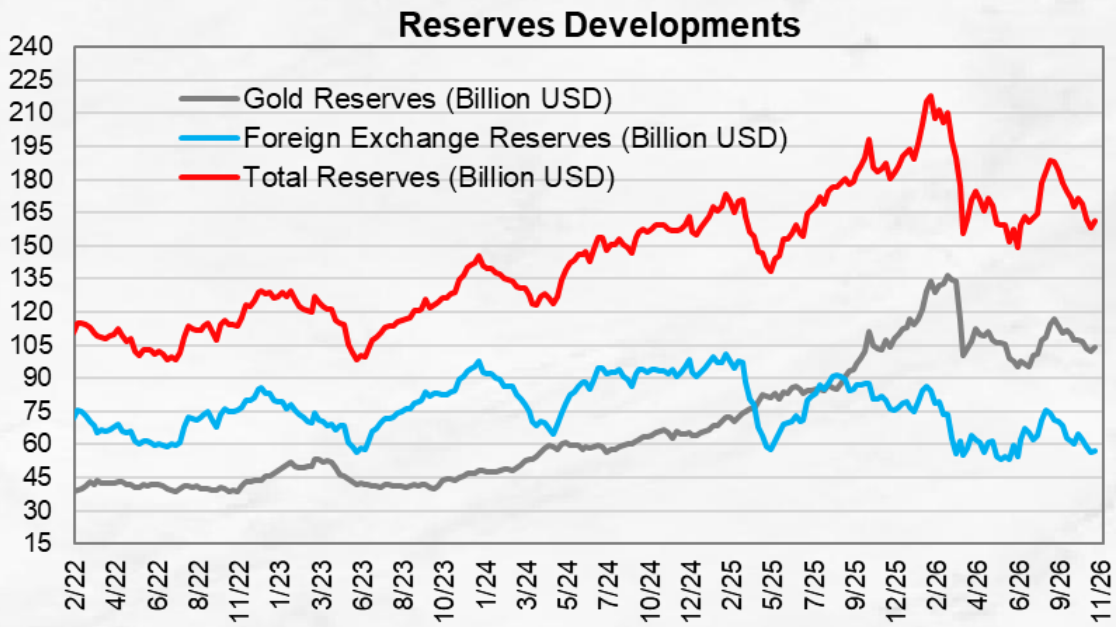

Interest Rates

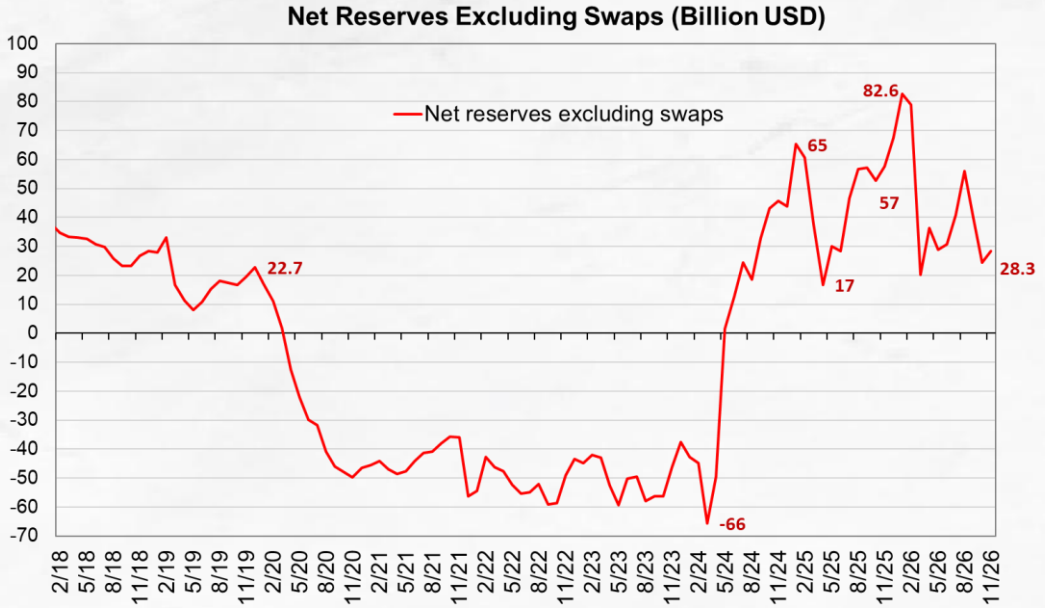

*1-3 Months Term TL Deposit

CBRT Reserves

Total reserves edged up at the start of November.

In 2025, total reserves rose by USD 39 billion year over year, ending the year at USD 193.9 billion. They had reached a record USD 218.2 billion in the week of January 30.

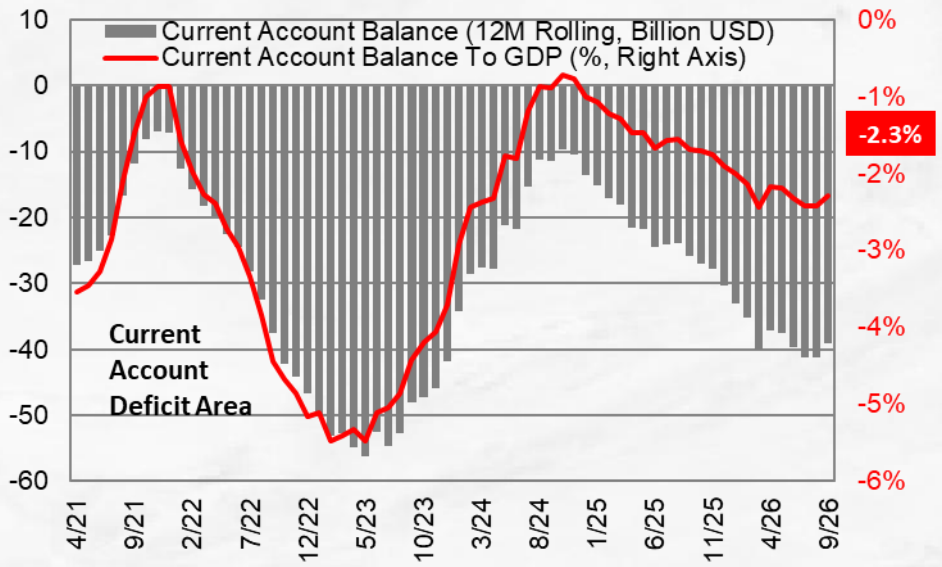

In the week of November 6:

- The Central Bank of the Republic of Türkiye's (CBRT) total reserves increased to USD 161.1 billion from USD 158.1 billion (gold: USD 104.0 billion; foreign exchange: USD 57 billion).
- Net reserves rose to USD 41.2 billion from USD 38 billion.
- Net reserves excluding swaps increased to USD 28.3 billion from USD 24.3 billion.

Current Account Balance

The current account deficit-to-GDP ratio remains below its historical average.

Cumulative Current Account and Current Account / GDP Ratio

Foreign Trade Indicators (October 2026)

Foreign Trade Data (Billion USD)	October (Monthly)			October (12M Cumulative)		
	2025	2026	Change (%)	2025	2026	Change (%)
Exports	24,0	25,9	8,1%	270,1	285,6	5,8%
İmports	31,5	32,6	3,4%	361,1	380,8	5,4%
Foreign Trade Volume	55,5	58,5	5,4%	631,2	666,4	5,6%
Foreign Trade Balance	-7,6	-6,7	-11,4%	-91,0	-95,1	4,5%
Proportion of imports covered by exports (%)	76,0	79,4		74,8	75,0	

In September, the monthly current account balance posted a surplus of USD 2.72 billion, close to market expectations of USD 2.75 billion. This marked the third consecutive monthly surplus.

The 12-month cumulative current account deficit edged down to USD 39.2 billion in September from USD 41.3 billion in August, its lowest level in four months. The current account deficit-to-GDP ratio also eased slightly to 2.3% from 2.4%, following four consecutive monthly increases. It remained below its long-term average. The calculation uses cumulative GDP based on the second-quarter 2026 outturn.

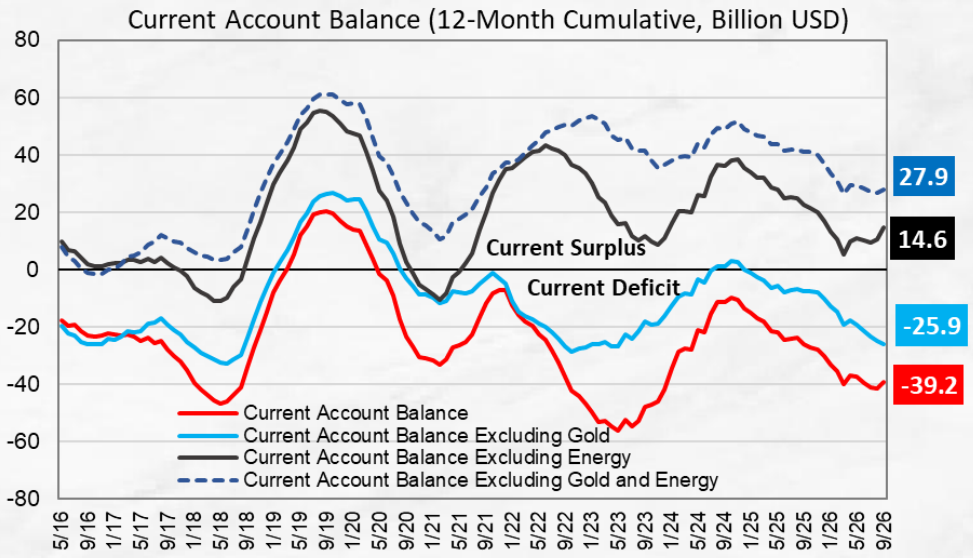

According to the preliminary foreign trade data released by the Ministry of Trade, the foreign trade deficit decreased by 11.4% year-on-year in October to USD 6.7 billion.

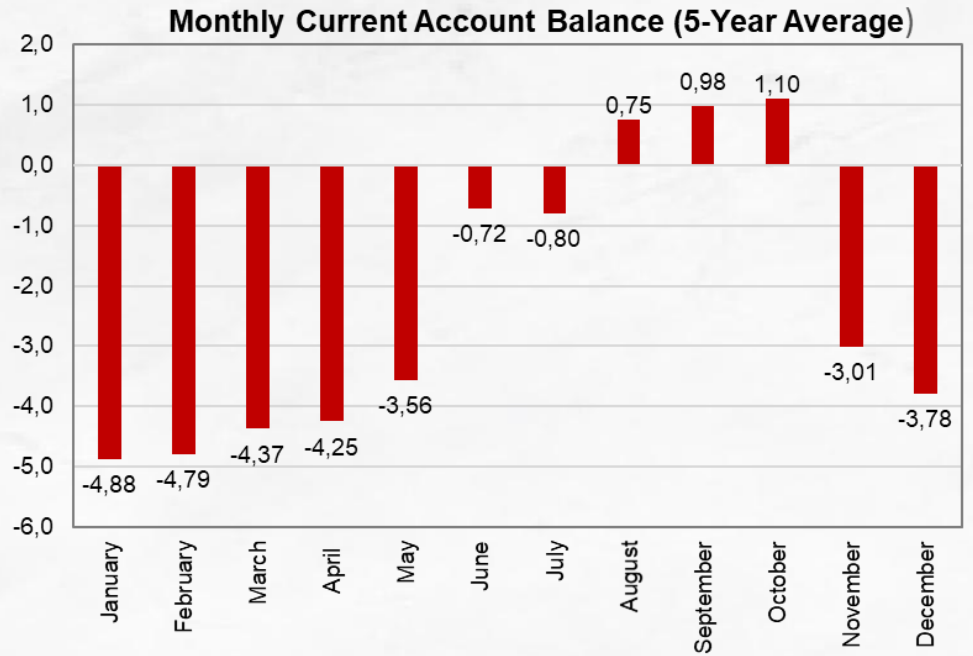

In October:

- **Exports increased by 8.1% year-on-year to USD 25,9 billion, marking the highest October figure on record.**
- **Imports rose by 3.4% year-on-year to USD 32.6 billion.**

Current Account Balance

Monthly Historical Course of the Current Account Balance and Current Account Balance Excluding Gold and Energy.

The monthly gold- and energy-excluded current account balance posted a surplus of USD 7.34 billion in September, extending its surplus streak to six consecutive months. The 12-month cumulative gold- and energy-excluded current account surplus rose to USD 27.9 billion from USD 26.8 billion.

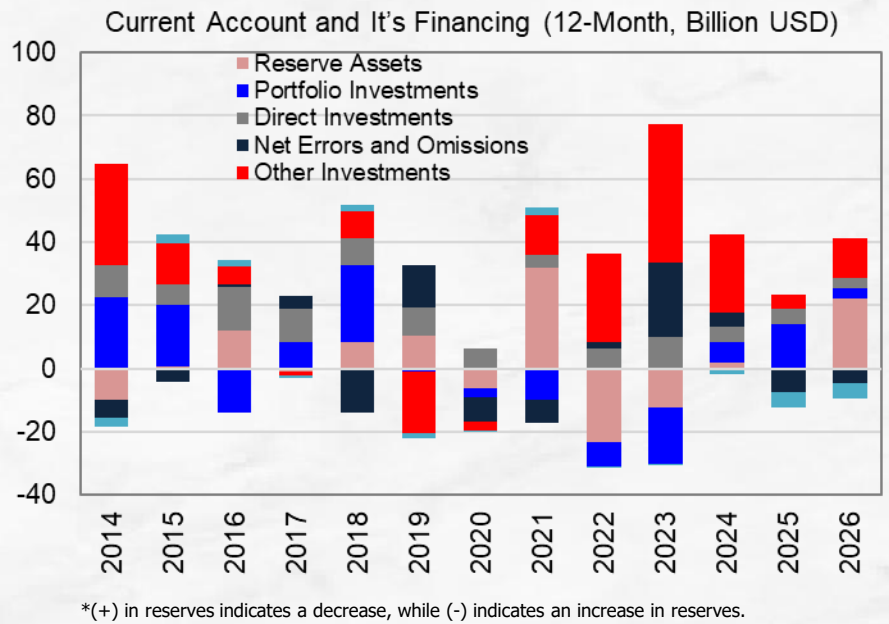

Cumulative 12-month energy imports have remained relatively low since reaching a record USD 96.5 billion in December 2022. After standing at USD 66.8 billion in August, energy imports edged up to USD 69.1 billion in September.

Cumulative 12-month gold imports have remained below their August 2023 record of USD 33.7 billion. They fell below USD 20 billion for the first time in 16 months, declining to USD 18 billion in September from USD 20.1 billion in August.

When monthly current account balance figures are examined historically on a 5-year average basis, it is observed that **the months with the largest current account deficit** are the first four months of the year, namely **January to April,** which include the winter period when fuel demand increases, while **the months with the largest current account surplus** are the period **between August and October**, which includes the summer months when the tourism season is lively.

Financing of the C/A Deficit

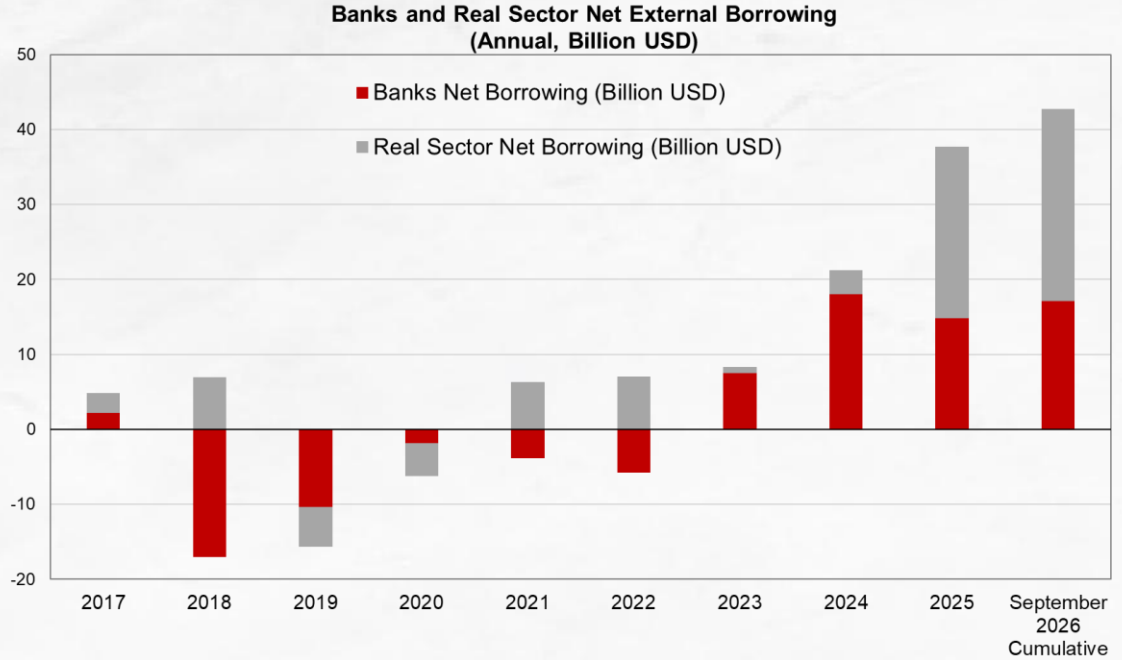

A Decline in Reserves and Outflows from Portfolio Investments

*(+) in reserves indicates a decrease, while (-) indicates an increase in reserves.

In September, the current account surplus was larger than in the same month a year earlier. However, substantial capital outflows led to a USD 10 billion decline in reserves. The net errors and omissions item recorded an inflow of approximately USD 0.96 billion, providing limited support to reserves.

After increasing by USD 7.14 billion in August, reserves fell by around USD 10 billion in September. Direct investment recorded a net inflow of USD 859 million, while portfolio investment saw a net outflow of USD 7.73 billion, financial derivatives a net outflow of USD 482 million, and other investment a net outflow of USD 6.35 billion.

As of September 2026, the banking sector and the corporate sector had cumulatively borrowed a net approximately USD 17,1 billion and USD 25,6 billion, respectively.

Portfolio Flows of Foreign Investors

In the week ending 6 November, foreign investors recorded net purchases of USD 367.2 million in the equity market. This brought their net purchases in the market since the beginning of the year to approximately **USD 1.61 billion**, ending a five-week run of net sales.

Foreign investors' share of the equity market rose to 38.78%. It stood at 35.8% at the end of 2025.

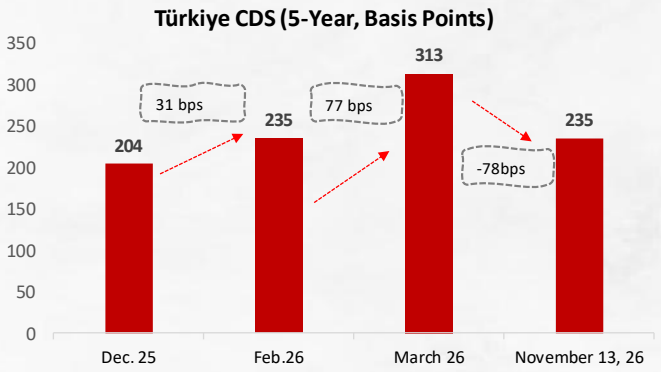

In the bond market, foreign investors recorded net purchases of approximately USD 36.9 million in the week ending 6 November. Their net purchases since the beginning of the year totaled approximately **USD 803 million**.

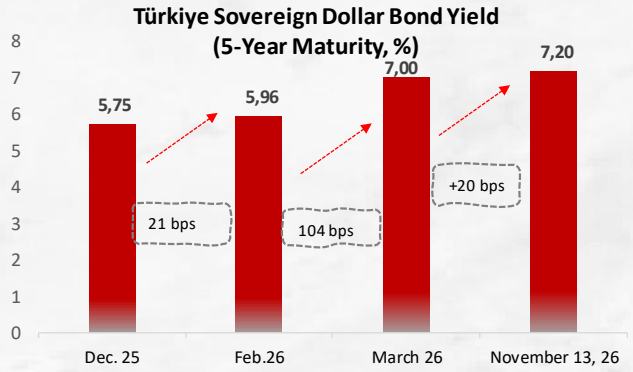

Foreign investors' share of outstanding domestic government debt securities (excluding repo) stood at 6.37% as of 6 November. It stood at 7.6% at the end of 2025.

B	B2	B	
B-	B3	B-	
Stable	*Stable*	*Stable*	

***The red-colored sections indicate Türkiye's credit rating.**

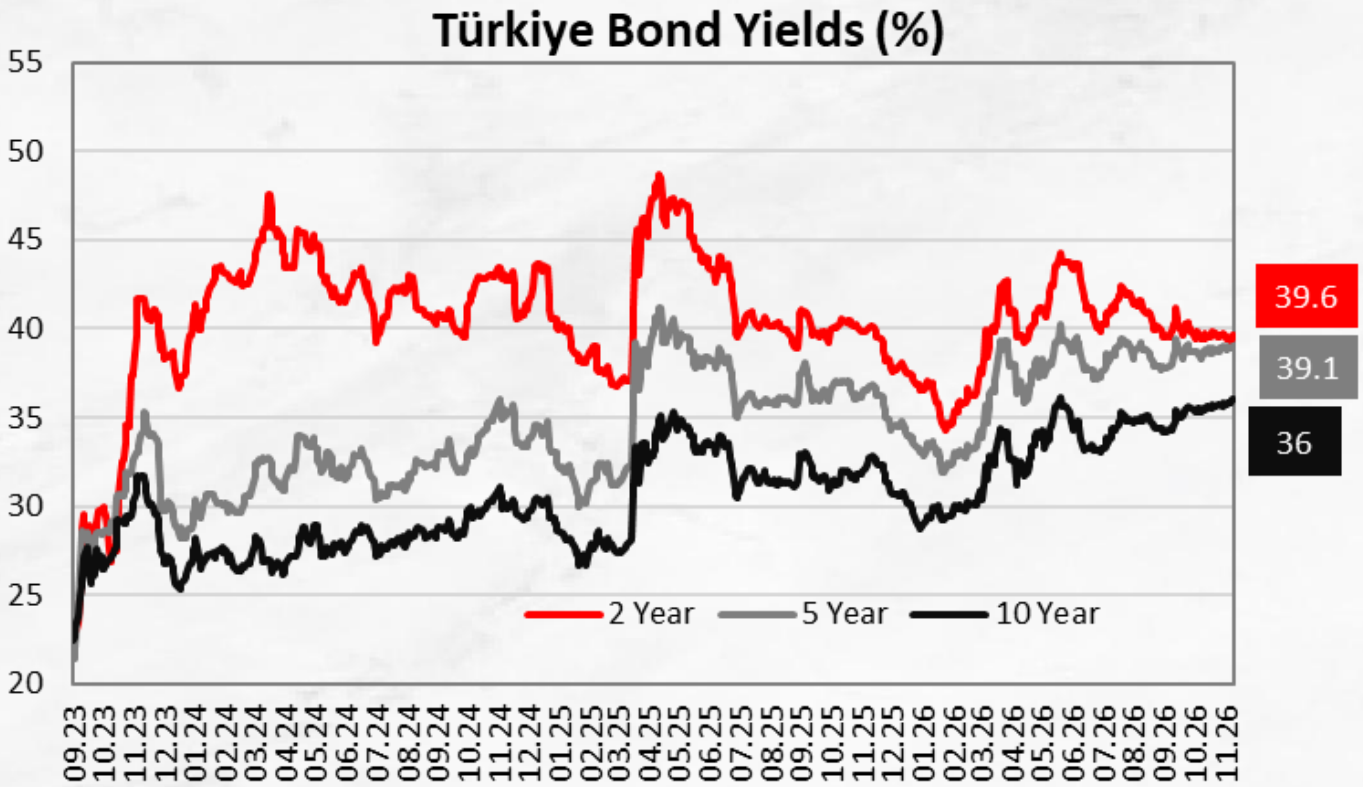

Türkiye's **5-year CDS** currently stands at around **235 basis points.**

- Türkiye's CDS premium recorded its **lowest level at 110.9 basis points on May 9, 2013**, while it reached its **highest level at 895.8 basis points on July 14, 2022**. A decline in CDS spreads facilitates **external borrowing at lower costs and with longer maturities**, easing access to international financing.

- **In 2024,** Türkiye was the only country to receive a two-notch upgrade from all **three major credit rating agencies.** In July 2025, Moody's upgraded Türkiye's sovereign credit rating from "B1" to "Ba3" and revised the outlook from "positive" to "stable".

- Fitch upgraded Türkiye's credit rating outlook from "stable" to "positive" at its January 2026 meeting. **In April 2026**, Fitch, in an unscheduled review, affirmed Türkiye's long-term foreign-currency sovereign credit rating at **BB-**, while revising the outlook from **positive to stable**.

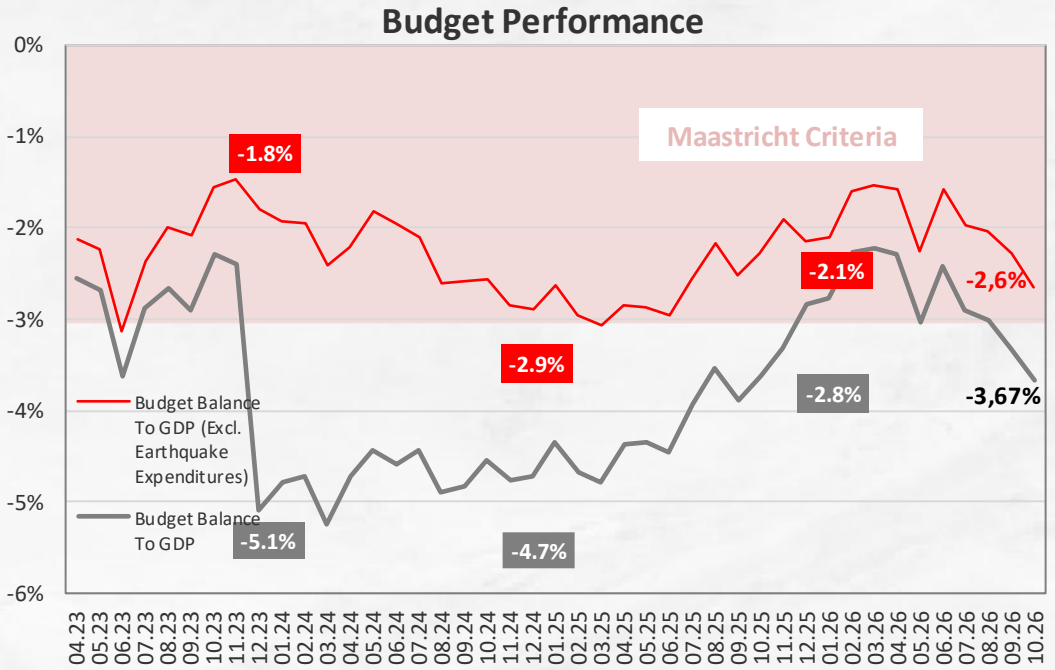

Türkiye Benchmark Goverment Bond Yields

Under pressure from higher global yields, Turkish bond yields rose more sharply at the medium and long ends of the curve.

Short-term lira bond yields, meanwhile, remained above the approximately 36% level seen before geopolitical tensions escalated on February 28.

Budget Balance and Fiscal Discipline

The central government budget posted a deficit of TRY 481 billion in October. The deficit narrowed from TRY 532 billion in September but remained above the TRY 223 billion recorded in October last year.

The 12-month cumulative budget deficit-to-GDP ratio rose to 3.67% in October, from 3.3% in September.

Despite the increase, the ratio remained well below its 2024 year-end level of 4.7% and above its 2025 year-end level of 2.8%. *(The ratio uses cumulative GDP data through the second quarter of 2026.)*

The average budget deficit-to-GDP ratios for 2024 and 2025 were 4.7% and around 4%, respectively.

	December-23	December-24	December-25	Mar.26	June-26	September-26	October-26
Budget Balance (Monthly, Billion TL)	- 848	- 831	- 528	- 230	114	- 532	- 481
Budget Balance (12-Month Cumulative, Billion TL)	- 1.380	- 2.108	- 1.799	- 1.508	- 1.761	- 2.422	- 2.680
Budget Balance/GDP Ratio (12-Month Cumulative)	-5,1%	-4,7%	-2,8%	-2,2%	-2,6%	-3,3%	-3,7%
Budget Balance Excluding Earthquake Expenditures / GDP Ratio	-1,8%	-2,9%	-2,1%	-1,5%	-1,7%	-2,3%	-2,6%

The OVP revised its 2026 budget deficit-to-GDP target down to 3.1% from 3.5%.

In 2025, the budget deficit-to-GDP ratio came in at 2.8%, below the OVP's year-end target of 3.6%. Excluding earthquake-related spending, the ratio was 2.1% in 2025—well below the Maastricht criterion—and stood at 2.6% as of October 2026.

In the 2026 Inflation Report, CBRT Governor Fatih Karahan noted that budget deficits had historically come in below forecasts and said he expected the deficit projected at 3.5% of GDP for 2027 to come in somewhat below that level.

Türkiye is exhibiting a relatively strong fiscal performance compared to its peers.

Summary of Developments in the Turkish Economy

SME Loans	57,0	33,6	47,7	27,5	31,8
Consumer Loans	74,0	43,5	46,5	26,0	30,1

There is a limit on credit growth except for selected sectors:

Eight-week increase;

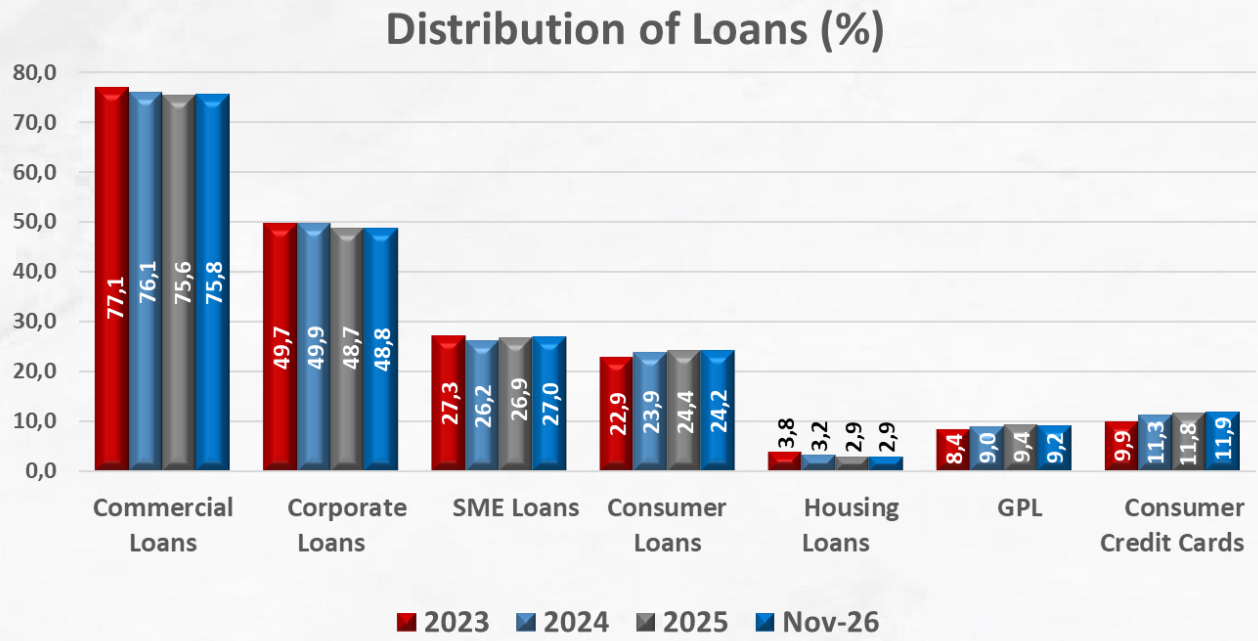

- 2,5% for **TL loans**; 5,5% for **SME loans**
- 3,5% growth limit for **consumer and vehicle loans**
- 0.5% on **FX loans**
- 1,0% on **Overdraft Account Limits**

Additionally, the total reserve requirement is at 15% of the loans.

Distribution of Loans

Compared to the end of last year, the share of commercial loans saw a slight increase, while the share of consumer loans showed a slight decline.

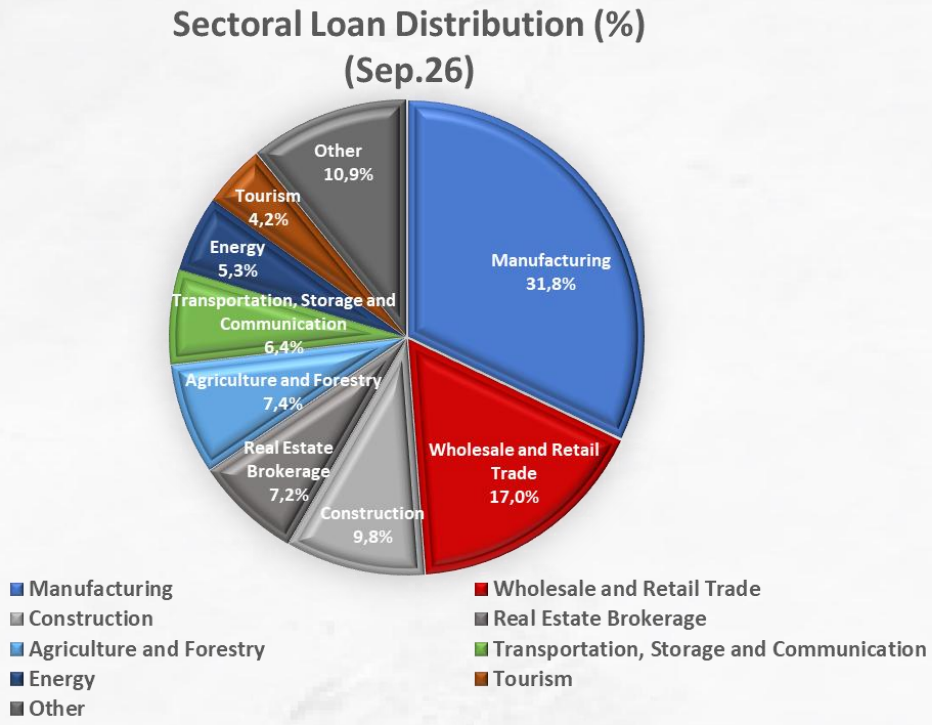

Distribution of Loans (%)	2023	2024	2025	Nov-26
Total Loans	100	100	100	100
Commercial Loans	77,1	76,1	75,6	75,8
Corporate Loans	49,7	49,9	48,7	48,8

- At the end of 2024, the CMB has introduced an obligation for money market funds, excluding funds that have the word "**participation**" in their title, to invest in **10% government domestic debt securities**. Following this regulation, it has been observed that the **demand for these funds** has decreased and interest has shifted to **hedge funds.**

Total Shareholders’ Equity and Return on Equity (ROE)

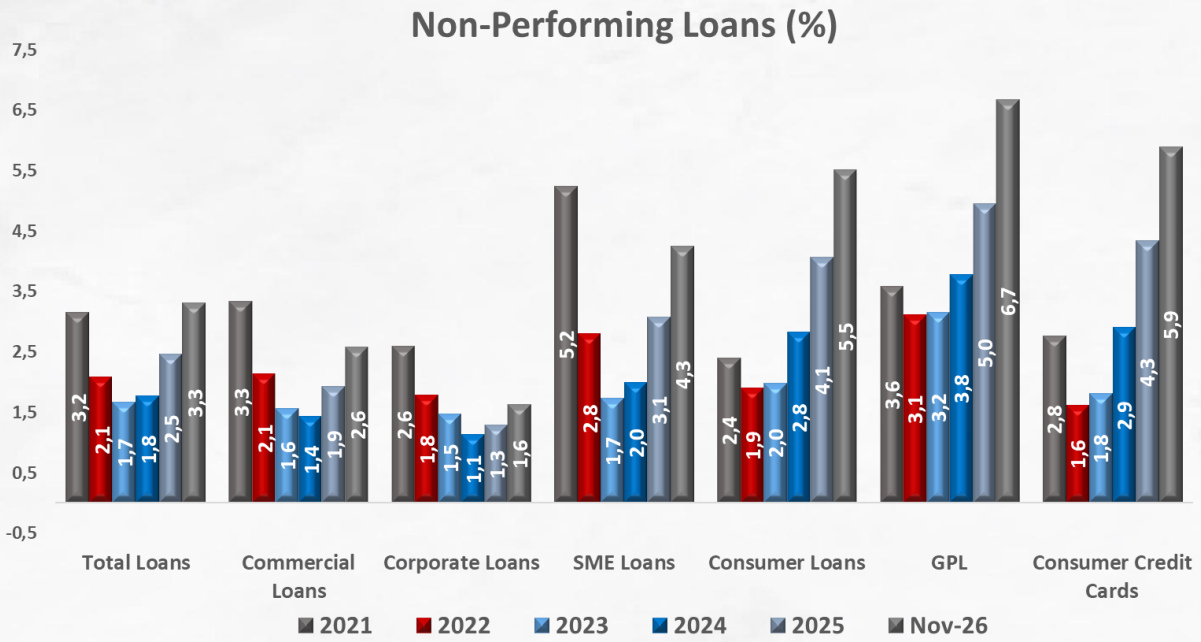

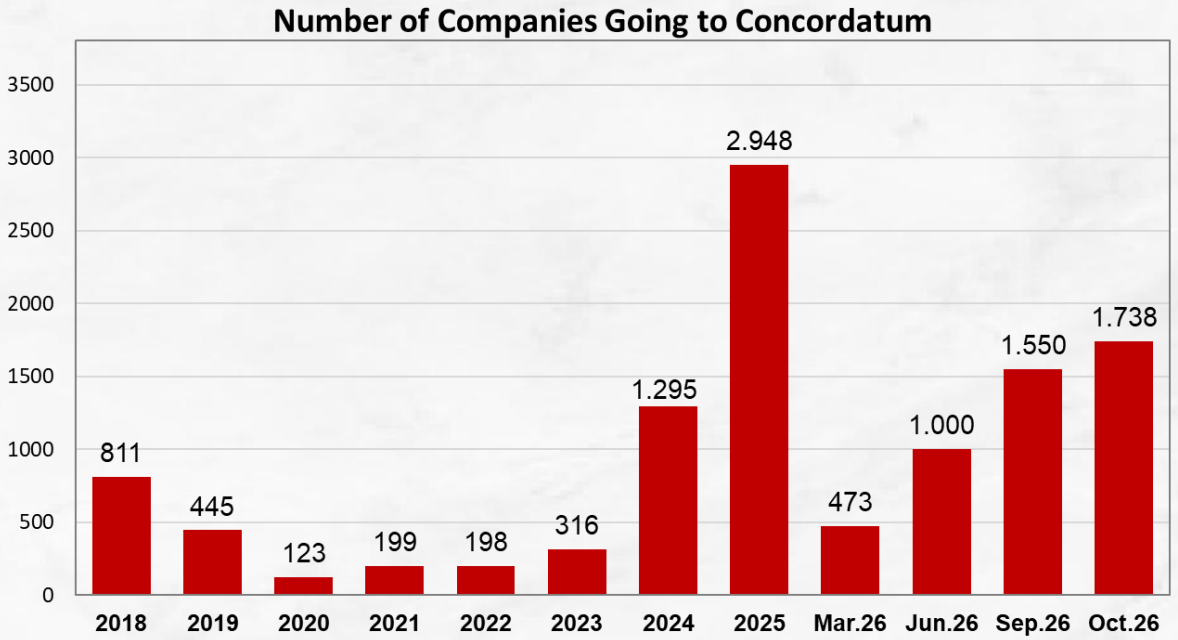

Non-Performing Loan Ratio (NPL Ratio)

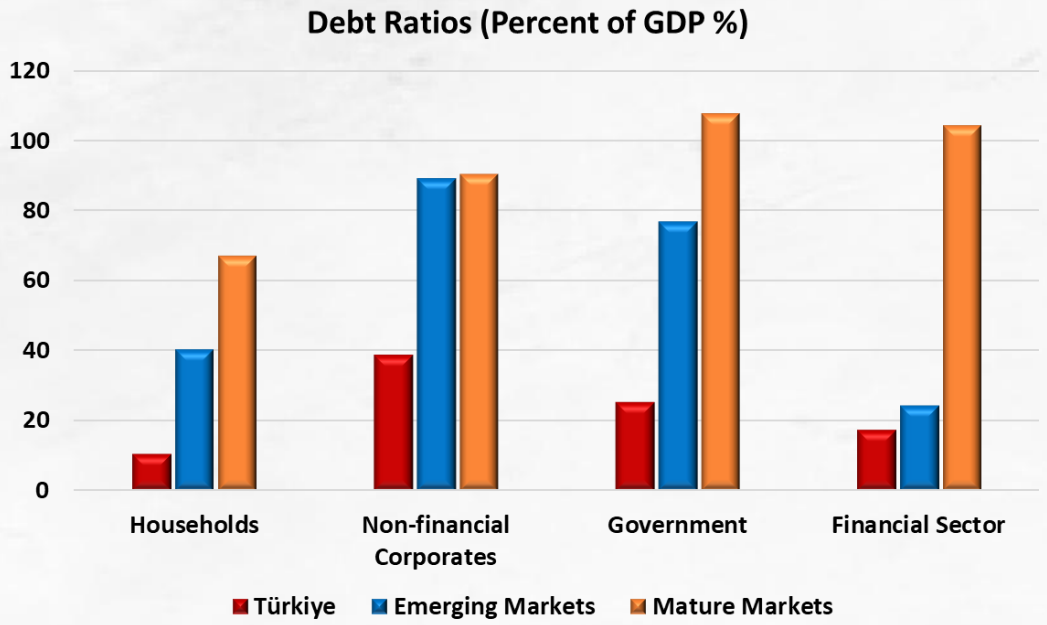

While the non-performing loan ratio showed a slight increase in commercial loans, it rose more rapidly in personal loans.

Non-Performing Loans (%)	2020	2021	2022	2023	2024	2025	Nov-26
Total Loans	4,2	3,2	2,1	1,7	1,8	2,5	3,3
Commercial Loans	4,9	3,3	2,1	1,6	1,4	1,9	2,6
Corporate Loans	3,9	2,6	1,8	1,5	1,1	1,3	1,6
SME Loans	6,9	5,2	2,8	1,7	2,0	3,1	4,3
Consumer Loans	2,2	2,4	1,9	2,0	2,8	4,1	5,5
Housing Loans	0,3	0,3	0,2	0,1	0,1	0,2	0,2
GPL	2,9	3,6	3,1	3,2	3,8	5,0	6,7
Vehicle Loans	0,9	1,1	0,2	0,2	0,4	0,6	1,3
Consumer Credit Cards	3,0	2,8	1,6	1,8	2,9	4,3	5,9

The Number of Concordatum and Debt Ratios

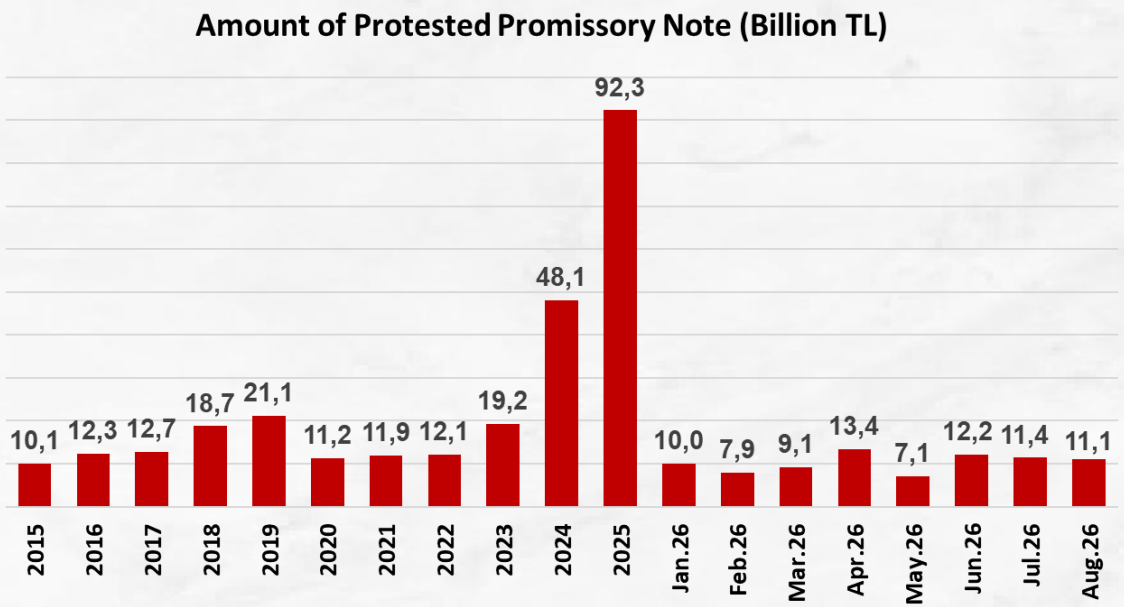

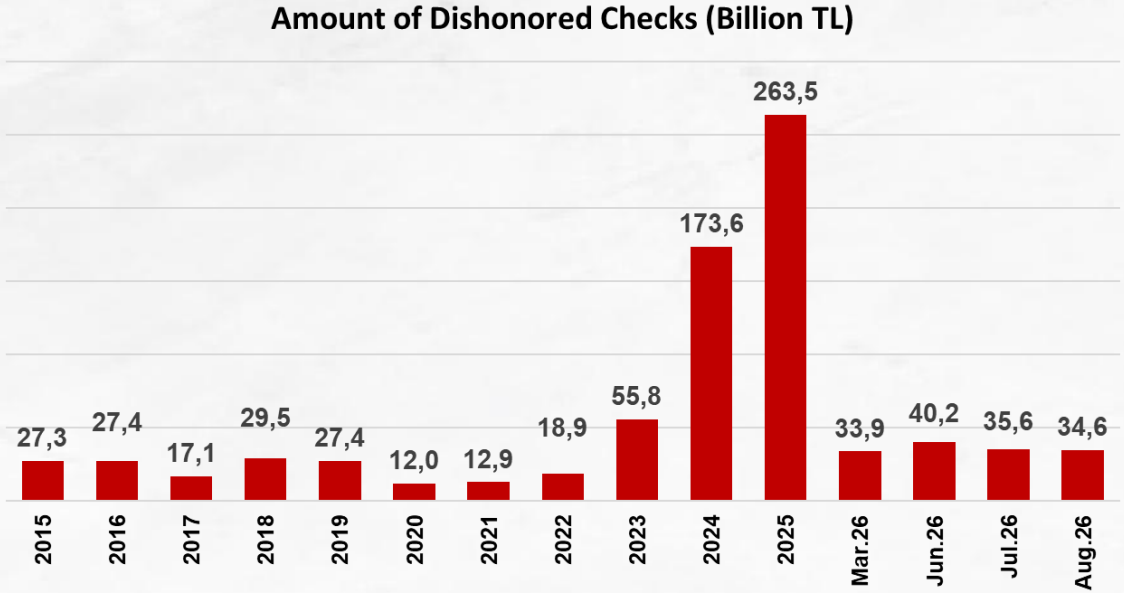

- When the status of the sectors is evaluated according to the concordatum applications, it is seen that the **construction and textile sectors** are the most risky sectors. However, it is observed that the **food, agriculture and manufacturing sectors** stand out as the most fragile sectors.

Debt Ratios (Percent of GDP %) June 2026	Türkiye	Emerging Markets	Mature Markets
Total	92	231	369
Households	11	40	67
Non-financial Corporates	38	89	90
Government	25	77	108
Financial Sector	17	24	104

Amounts of Protested Promissory Notes and Dishonored Checks

- The amount of protested bills of exchange **increased by 92.1%** in 2025 compared to the previous year, reaching a peak of **92.3 billion TL**.
- **In August 2026,** it was recorded at **11.1 billion TL,** representing a **58% increase** compared to the same period of the previous year.

- The amount of bounced checks **increased by 52%** in 2025 compared to the previous year, reaching a peak of **263.5 billion TL.**
- **In August 2026,** it was recorded at **34.6 billion TL,** representing a **83% increase** compared to the same period of the previous year.

2026: Opportunities and Threats

Global Economy – 2026

STRENGTHS

Differentiated Regional Growth

Economic growth outlooks vary significantly across different global regions.

Moderate Energy Prices

Stable energy costs are helping to support the global inflation outlook.

Growing Sustainability Awareness

Increased environmental consciousness is encouraging investment in the green economy

WEAKNESSES

Geopolitical Risks & Uncertainty

Political tensions and tariff disputes negatively impact global trade

High Debt & Inequality

Rising public and private sector debt threatens financial stability

Cautious Central Bank Policies

A "walt-and-see" approach to monetary policy creates market uncertainty

OPPORTUNITIES

Post-Pandemic Global Recovery

Revived economic activity is creating new market potential

Technology & Digitalization

Digital transformation is creating a foundation for increased productivity

Rise of Green Financing

Growing financial resources for sustainable projects are supporting growth

THREATS

Protectionism & Sanctions

Trade wars and economic sanctions risk disrupting global supply chains

Climate & Environmental Risks

Environmental challenges pose a serious and costly threat to economic activities

Increased Political Polarization

Divisions within and between countries are increasing global instability

2026: Opportunities and Threats

Turkish Economy – 2026

STRENGTHS

Growth Potential & Dynamic Private Sector

A strong domestic market and investment appetite support expansion, driven by innovative and competitive private companies.

Relatively Young Population

High potential for labor force participation and consumer demand provides a long-term demographic advantage.

WEAKNESSES

High Inflation & Weak Productivity

Rising prices negatively impact purchasing power and stability, while low productivity signals a need for structural reforms.

Dependency on Imports

Reliance on intermediate goods and energy imports leads to currency fluctuations and increased costs due to global price volatility.

OPPORTUNITIES

Global Recovery & Improved Credit Ratings

A revival in export markets boosts activity, while better credit ratings and CDS levels enhance international capital flows.

Green Finance Funds

New financing opportunities are emerging for sustainable development and environmentally-focused projects.

THREATS

Geopolitical & Trade Risks

Regional instabilities and trade wars put foreign trade and global supply chains at considerable risk.

Carbon Border Adjustment Mechanism

New environmental regulations may create extra costs and challenges for key exporting sectors.

ECONOMIC RESEARCH
